Operation & Maintenance Manual
S130 Skid-Steer Loader

S/N A8KA60001 & Above
OPERATOR SAFETY WARNINGS

Always use the seat bar and fasten the seat belt snugly. Always keep feet on the foot pedals or footrests when operating loaders.

Never use loaders without operator cab with ROPS and FOPS approval. Fasten your seat belt.

Never carry riders.

Avoid exceeding Rated Operating Capacity.

Never exit loaders with engine running or with lift arms up.

SAFETY EQUIPMENT

The Bobcat loaders must be equipped with safety items necessary for each job. Ask your dealer for information on the safe use of attachments and accessories.

1. SEAT BELT: Check belt fasteners and check for damaged webbing or buckle.
2. SEAT BAR: When up, it must lock the loader controls.
3. OPERATOR CAB (ROPS and FOPS): It must be on the loader with all fasteners tight.
4. OPERATOR’S HANDBOOK: Must be in the cab.
5. SAFETY SIGNS (DECALS): Replace if damaged.
6. SAFETY TREADS: Replace if damaged.
7. GRAB HANDLES: Replace if damaged.
8. LIFT ARM SUPPORT DEVICE: Replace if damaged.
9. PARKING BRAKE
10. BOBCAT INTERLOCK CONTROL SYSTEM (BICS)

FOREWORD

This Operation & Maintenance Manual was written to give the owner / operator instructions on the safe operation & maintenance of the Bobcat loader. READ AND UNDERSTAND THIS OPERATION & MAINTENANCE MANUAL BEFORE OPERATING YOUR BOBCAT LOADER. If you have any questions, see your Bobcat dealer. This manual can illustrate options and accessories not installed on your loader.

BOBCAT COMPANY IS ISO 9001 CERTIFIED

ISO 9001 is an international standard that specifies requirements for a quality management system that controls the processes and procedures which we use to design, develop, manufacture and distribute Bobcat products.

British Standards Institute (BSI) is the Certified Registrar Bobcat Company chose to assess the Company’s compliance with the ISO 9001 at Bobcat’s manufacturing facilities in Gwinner and Bismarck, North Dakota (U.S.A.), Pontchateau (France), Dobris (Czech Republic) and the Bobcat corporate offices (Gwinner, Bismarck & West Fargo) in North Dakota. Only certified assessors, like BSI, can grant registrations.

ISO 9001 means that as a company we say what we do and do what we say. In other words, we have established procedures and policies, and we provide evidence that the procedures and policies are followed.

NOTE: Always verify Part Numbers with your Bobcat dealer.
SERIAL NUMBER LOCATIONS

Always use the serial number of the loader when requesting service information or when ordering parts. Early or later models (identification made by serial number) can use different parts, or it can be necessary to use a different procedure in doing a specific service operation.

**Figure 1**

The loader serial number plate (Item 1) is located on the outside of the loader frame.

**Loader Serial Number**

The loader serial number plate (Item 1) is located on the outside of the loader frame.

**Explanation of loader Serial Number:**

```
XXXX  XXXXX

Module 2. - Production Sequence (Series)

Module 1. - Model / Engine Combination
```

1. The four digit Model / Engine Combination Module number identifies the model number and engine combination.

2. The five digit Production Sequence Number identifies the order which the loader is produced.

**Engine Serial Number**

**Figure 2**

The engine serial number is located on the side of the engine (Item 1).

**DELIVERY REPORT**

**Figure 3**

The delivery report must be completed by the dealer and signed by the owner or operator when the Bobcat loader is delivered. An explanation of the form must be given to the owner.
LOADER IDENTIFICATION

[1] Optional or Field Accessory (Not Standard Equipment)
[3] BUCKETS - Several different buckets and other attachments are available for the Bobcat loader.
FEATURES, ACCESSORIES AND ATTACHMENTS

Standard Items

Model S130 Bobcat loaders are equipped with the following standard items:

• Adjustable Vinyl Seat
• Automatically Activated Glow Plugs
• Auxiliary Hydraulics
• Bobcat Interlock Control System (BICS™)
• Bob-Tach™
• Deluxe Cab (includes: interior insulation, top and rear windows, accessory harness, dome light and 12 volt power port) ROPS and FOPS Approved
• Engine / Hydraulic Systems Shutdown
• Front Horn / Back-up Alarm
• Instrumentation: Hourmeter, Engine Temperature and Fuel Gauges and Warning Lights
• Lift Arm Support Device
• Lights, Front and Rear
• Parking Brake
• Seat Bar
• Seat Belt
• Spark Arrester Muffler
• Tyres (10-16.5, Bobcat Standard Duty, 8 ply Rating)

Options And Accessories

Below is a list of some equipment available from your Bobcat loader dealer as Dealer and/or Factory Installed Accessories and Factory Installed Options. See your Bobcat dealer for other available options and accessories.

• Access Cover Kit (Foot Pedal Area)
• Accessories Electrical Harness
• Adjustable Air Ride Suspension Seat
• Adjustable Suspension Seat
• Advanced Control System (ACS) (Selectable Foot Pedal or Hand Control)
• Selectable Joystick Controls (SJC) (Selectable ‘ISO’ or ‘H’ Pattern Control)
• Auxiliary Hydraulics, Rear
• Auxiliary Hydraulics, Front - Right Hand Side
• Attachment Control Device (ACD)
• Bucket Shield Kit
• Cab Door
• Cab Enclosure
• Cab Heater
• Catalytic Exhaust Purifier
• Counterweight Kit
• Deluxe Instrumentation Panel
• Dual Attachment Control Kit
• Engine Heater
• Extended Pedals

Options And Accessories (Cont’d)

• Fire Extinguisher
• FOPS Kit (Level II)
• GPS System
• Hose Guide
• Hydraulic Bucket Positioning (Includes On / Off Selection)
• Keyless Start
• Lift Kit (4-Point, Single Point)
• Locking Fuel Cap
• MSHA Approval Kit
• Power Bob-Tach
• Radiator Screen Kit
• Rear Window Wiper
• Ride Control
• Rotating Beacon
• Road Kit (manually controlled machines)
• Road Kit (SJC controlled machines)
• Road Option (manually controlled machines)
• Road Option (SJC controlled machines)
• Seat Belt with 3-Point Restraint
• Seat Belt - 3 Inch Wide
• Seat Belt - Retractable
• Sound Cab (Reduces noise at operator ear)
• Sound Reduction Kit (Reduces noise at operator ear)
• Special Applications Kit
• Steel Tracks
• Strobe Light
• Tailgate Lock
• Tyres:
  Bobcat Heavy Duty 10 - 16.5 10 Ply Rating
  Bobcat Severe Duty 10 - 16.5 10 Ply Rating
  Bobcat Severe Duty Poly-Fill 10 - 16.5 10 Ply Rating
  Bobcat Heavy Duty Flotation 31X12 - 16.5 10 Ply
• Tool Container
• Warning Lights: Four-Way Flasher (Includes Direction Signals)
• Vinyl Cab Enclosure
• Weighlog Kit
• Windows
  Top and Rear Windows
  Side Windows
  Polycarbonate Rear Window
  Polycarbonate Top Window
  Externally Removable Rear Window

Specifications subject to change without notice and standard items can vary.
FEATURES, ACCESSORIES AND ATTACHMENTS (CONT’D)

These and other attachments are approved for use on this model loader. Do not use unapproved attachments. Attachments not manufactured by Bobcat can not be approved.

The versatile Bobcat loader quickly turns into a multi-job machine with a tight-fit attachment hook-up . . . from bucket to grapple to pallet fork to backhoe and a variety of other attachments.

See your Bobcat dealer for information about approved attachments and attachment Operation & Maintenance Manuals.

Increase the versatility of your Bobcat loader with a variety of bucket styles and sizes.

Buckets Available

Many bucket styles, widths and different capacities are available for a variety of different applications. They include Construction & Industrial, Low Profile, Fertilizer and Snow, to name a few. See your Bobcat dealer for the correct bucket for your Bobcat loader and application.

Attachments

- Angle Broom
- Auger
- Backhoe
- Blades
  - Dozer Blade
  - Snow Blade
  - V-Blade
- Brush Saw
- Breaker, Hydraulic
- Buckets
- Bucket Adapter
- Chipper, Wood
- Combination Bucket
- Concrete Mixer
- Cutter Crusher
- Digger
- Dumping Hopper
- Flail Cutter
- Forks, Utility
- Grader
- Grapple, Farm / Utility
- Grapple, Industrial
- Grapple, Root
- Landplane
- Landscape Rake
- Mower
- Packer Wheel
- Pallet Forks
- Planer
- Rear Stabilizers
- Scarifier
- Scraper
- Seeder
- Snow Pusher
- Snowblower
- Sod Layer
- Soil Conditioner
- Spreader
- Steel Tracks
- Sweeper
- Three-Point Hitch Adapter
- Tiller
- Tilt-Tatch
- Trench Compactor
- Trencher
- Utility Frame
- Vibratory Roller
- Water Kit
- Whisker Broom
- X-Change™ Frame
FEATURES, ACCESSORIES AND ATTACHMENTS (CONT’D)

Special Applications Kit

WARNING

AVOID INJURY OR DEATH

Some attachment applications can cause flying debris or objects to enter front, top or rear cab openings. Install the Special Applications Kit to provide added operator protection in these applications.

W-2737-0608

Figure 4

Available for special applications to restrict material from entering cab openings. Kit includes 12.7 mm (0.5 in) thick polycarbonate front door, top and rear windows [Figure 4].

See your Bobcat dealer for availability.

Special Applications Kit Inspection And Maintenance

• Inspect for cracks or damage. Replace if required.
• Pre-rinse with water to remove gritty materials.
• Wash with a mild household detergent and warm water.
• Use a sponge or soft cloth. Rinse well with water and dry with a clean soft cloth or rubber squeegee.
• Do not use abrasive or highly alkaline cleaners.
• Do not clean with metal blades or scrapers.

SAFETY INSTRUCTIONS

Before Operation

Carefully follow the operating and maintenance instructions in this manual.

The Bobcat loader is highly maneuverable and compact. It is rugged and useful under a wide variety of conditions. This presents an operator with hazards associated with off motorway, rough terrain applications, common with Bobcat loader usage.

The Bobcat loader has an internal combustion engine with resultant heat and exhaust. All exhaust gases can kill or cause illness so use the Loader with adequate ventilation.

The dealer explains the capabilities and restrictions of the Bobcat loader and attachment for each application. The dealer demonstrates the safe operation according to Bobcat instructional materials, which are also available to operators. The dealer can also identify unsafe modifications or use of unapproved attachments. The attachments and buckets are designed for a Rated Operating Capacity (some have restricted lift heights). They are designed for secure fastening to the Bobcat loader. The user must check with the dealer, or Bobcat literature, to determine safe loads of materials of specified densities for the machine - attachment combination.

The following publications and training materials provide information on the safe use and maintenance of the Bobcat machine and attachments:

• The Delivery Report is used to assure that complete instructions have been given to the new owner and that the machine and attachment is in safe operating condition.

• The Operation & Maintenance Manual delivered with the machine or attachment gives operating information as well as routine maintenance and service procedures. It is a part of the machine and can be stored in a container provided on the machine. Replacement Operation & Maintenance Manuals can be ordered from your Bobcat dealer.

• Machine signs (decals) instruct on the safe operation and care of your Bobcat machine or attachment. The signs and their locations are shown in the Operation & Maintenance Manual. Replacement signs are available from your Bobcat dealer.

• An Operator’s Handbook is fastened to the operator cab of the loader. Its brief instructions are convenient to the operator. See your Bobcat dealer for more information on translated versions.

The dealer and owner / operator review the recommended uses of the product when delivered. If the owner / operator will be using the machine for a different application(s) he or she must ask the dealer for recommendations on the new use.
SAFETY INSTRUCTIONS (CONT’D)

Safe Operation Is The Operator’s Responsibility

⚠️ Safety Alert Symbol

This symbol with a warning statement means: “Warning, be alert! Your safety is involved!”
Carefully read the message that follows.

⚠️ WARNING

Operator must have instructions before operating the machine. Untrained operators can cause injury or death.

Page 20
20 S130 Operation & Maintenance Manual

Safe Operation Needs A Qualified Operator

For an operator to be qualified, he or she must not use drugs or alcoholic drinks which impair alertness or coordination while working. An operator who is taking prescription drugs must get medical advice to determine if he or she can safely operate a machine.

A Qualified Operator Must Do The Following:

Understand the Written Instructions, Rules and Regulations

- Check the rules and regulations at your location. The rules may include an employer’s work safety requirements. For driving on public roads, the machine must be equipped as stipulated by the local regulations authorising operation on public roads in your specific country. Regulations may identify a hazard such as a utility line.

Have Training with Actual Operation

- Operator training must consist of a demonstration and verbal instruction. This training is given by your Bobcat dealer before the product is delivered.
- The new operator must start in an area without bystanders and use all the controls until he or she can operate the machine and attachment safely under all conditions of the work area. Always fasten seat belt before operating.

Know the Work Conditions

- Know the weight of the materials being handled. Avoid exceeding the Rated Operating Capacity (ROC) of the machine. Material which is very dense will be heavier than the same volume of less dense material. Reduce the size of the load if handling dense material.
- The operator must know any prohibited uses or work areas, for example, he or she needs to know about excessive slopes.
- Know the location of any underground lines.
- Wear tight fitting clothing. Always wear safety glasses when doing maintenance or service. Safety glasses, respiratory equipment, hearing protection or Special Applications Kits are required for some work. See your Bobcat dealer about Bobcat Safety Equipment for your model.
SAFETY INSTRUCTIONS (CONT'D)

Avoid Silica Dust

Cutting or drilling concrete containing sand or rock containing quartz may result in exposure to silica dust. Use a respirator, water spray or other means to control dust.

FIRE PREVENTION

Maintenance

The machine and some attachments have components that are at high temperatures under normal operating conditions. The primary source of high temperatures is the engine and exhaust system. The electrical system, if damaged or incorrectly maintained, can be a source of arcs or sparks.

Flammable debris (leaves, straw, etc.) must be removed regularly. If flammable debris is allowed to accumulate, it can cause a fire hazard. Clean often to avoid this accumulation. Flammable debris in the engine compartment is a potential fire hazard.

The operator's area, engine compartment and engine cooling system must be inspected every day and cleaned if necessary to prevent fire hazards and overheating.

All fuels, most lubricants and some coolants mixtures are flammable. Flammable fluids that are leaking or spilled onto hot surfaces or onto electrical components can cause a fire.

Operation

Do not use the machine where exhaust, arcs, sparks or hot components can contact flammable material, explosive dust or gases.

Electrical

Check all electrical wiring and connections for damage. Keep the battery terminals clean and tight. Repair or replace any damaged part or wires that are loose or frayed.

Battery gas can explode and cause serious injury. Use the procedure in the Operation & Maintenance Manual for connecting the battery and for jump starting. Do not jump start or charge a frozen or damaged battery. Keep any open flames or sparks away from batteries. Do not smoke in battery charging area.
FIRE PREVENTION (CONT'D)

Hydraulic System

Check hydraulic tubes, hoses and fittings for damage and leakage. Never use open flame or bare skin to check for leaks. Hydraulic tubes and hoses must be properly routed and have adequate support and secure clamps. Tighten or replace any parts that show leakage.

Always clean fluid spills. Do not use petrol or diesel fuel for cleaning parts. Use commercial non-flammable solvents.

Fueling

Stop the engine and let it cool before adding fuel. No smoking! Do not refuel a machine near open flames or sparks. Fill the fuel tank outdoors.

Starting

Do not use ether or starting fluids on any engine that has glow plugs or air intake heater. These starting aids can cause explosion and injure you or bystanders.

Use the procedure in the Operation & Maintenance Manual for connecting the battery and for jump starting.

Spark Arrester Exhaust System

The spark arrester exhaust system is designed to control the emission of hot particles from the engine and exhaust system, but the muffler and the exhaust gases are still hot.

Check the spark arrester exhaust system regularly to make sure it is maintained and working properly. Use the procedure in the Operation & Maintenance Manual for cleaning the spark arrester muffler (if equipped).

Welding And Grinding

Always clean the machine and attachment, disconnect the battery, and disconnect the wiring from the Bobcat controllers before welding. Cover rubber hoses, battery and all other flammable parts. Keep a fire extinguisher near the machine when welding.

Have good ventilation when grinding or welding painted parts. Wear dust mask when grinding painted parts. Toxic dust or gas can be produced.

Dust generated from repairing non-metallic parts such as hoods, fenders or covers can be flammable or explosive. Repair such components in a well ventilated area away from open flames or sparks.

Fire Extinguishers

Know where fire extinguishers and first aid kits are located and how to use them. Inspect the fire extinguisher and service the fire extinguisher regularly. Obey the recommendations on the instructions plate.
MACHINE SIGNS (DECALS)

Follow the instructions on all the Machine Signs (Decals) that are on the loader. Replace any damaged machine signs and be sure they are in the correct locations. Machine signs are available from your Bobcat loader dealer.
MACHINE SIGNS (DECALS) (CONT’D)

Follow the instructions on all the Machine Signs (Decals) that are on the loader. Replace any damaged machine signs and be sure they are in the correct locations. Machine signs are available from your Bobcat loader dealer.
MACHINE SIGNS (DECALS) (CONT’D)

No-Text Safety Signs

Safety signs are used to alert the equipment operator or maintenance person to hazards that can be encountered in the use and maintenance of the equipment. The location and description of the safety signs are detailed in this section. Please become familiarized with all safety signs installed on the machine / attachment.

Vertical Configuration

![Vertical Configuration Diagram]

Horizontal Configuration

![Horizontal Configuration Diagram]

The format consists of the hazard panel(s) and the avoidance panel(s):

- Hazard panels depict a potential hazard enclosed in a safety alert triangle.
- Avoidance panels depict actions required to avoid the hazards.

A safety sign can contain more than one hazard panel and more than one avoidance panel.

NOTE: See the numbered MACHINE SIGNS (DECALS) on Page 23 for the machine location of each correspondingly numbered no-text decal.

1. Hot Pressurised Fluid (7169699)

This safety sign is located on the engine coolant tank cap.

![Hot Pressurised Fluid Sign]

**WARNING**

- Never open hot.
- OPEN SLOWLY.

INSTRUMENT PANEL IDENTIFICATION (CONT'D)

Display Screen

The display screen can display the following information:

- Operating hours.
- Engine revolutions per minute (rpm).
- Speed management setting.
- Maintenance clock countdown.
- Battery voltage.
- Service codes.
- Engine preheat countdown.
- Steering drift compensation setting.
- Drive response setting.

Figure 10

The display screen is shown in [Figure 10]. The data display will show operating hours upon startup.

1. Data Display.
2. Hourmeter.
3. Speed Management.
4. Engine Preheat.
5. Engine Revolutions Per Minute.
7. Service.
### INSTRUMENT PANEL IDENTIFICATION (CONT’D)

#### Standard Key Panel

![Figure 11](image)

This machine can be equipped with a Standard Key Panel [Figure 11].

The Standard Key Panel is used to turn the loader electrical system on and off, and to start and stop the engine.

#### Keyless Start Panel

![Figure 12](image)

This machine can be equipped with a Keyless Start Panel [Figure 12].

1. **Keypad (keys 1 through 0):** Used to enter a number code (password) to allow starting the engine. An asterisk will show in the left panel display screen for each key press.

2. **LOCK Key:** Used to lock keypad. The lock key will display a red light to indicate a password is required to start the loader. (See Password Lockout Feature on Page 165.)

3. **UNLOCK Key:** Used to unlock keypad. The unlock key will display a green light to indicate the loader can be started without a password. (See Password Lockout Feature on Page 163.)

4. **START Button:** Used to start the engine.

5. **STOP Button:** Used to stop the engine and shut down the loader electrical system.

6. **RUN Button:** Used to turn on the loader electrical system.
This machine can be equipped with a Deluxe Instrumentation Panel [Figure 13].

1. **Display Screen**: The Display Screen is where all system setup, monitoring, troubleshooting and error conditions are displayed.

2. **Bobcat Main Controller Error**: Indicates communication error between Bobcat Main Controller and Deluxe Instrumentation Panel. (See DIAGNOSTIC SERVICE CODES on Page 155.)

3. **Display Error**: Indicates communication error between instrument panel and Bobcat controller. (See DIAGNOSTIC SERVICE CODES on Page 155.)

4. **BobCARE PMSM Icon**: Indicates planned maintenance is due.

5. **Engine Air Filter Icon**: Indicates engine air filter requires service.

6. **Hydraulic Filter Icon**: Indicates hydraulic filter requires service.

7. **Selection Buttons**: The four Selection Buttons allow you to select items from the Display Screen and scroll through screens.

8. **Stop Button**: Used to stop the engine and shut down the loader electrical system.

9. **Keypad**: The numeric keypad has two functions:
   - To enter a number code (password) to allow starting the engine.
   - To enter a number as directed for further use of the Display Screen.

10. **Start Button**: Used to start the engine.

11. **Run / Enter Button**: Used to turn on the loader electrical system.
INSTRUMENT PANEL IDENTIFICATION (CONT’D)

Deluxe Instrumentation Panel (Cont’d)

Figure 14

The first screen you will see on your new loader will be as shown in [Figure 14].

When this screen is on the display you can enter the password and start the engine or change the Display Screen setup features.

NOTE: Your new loader (with Deluxe Instrumentation Panel) will have an Owner Password. Your dealer will provide you with this password. Change the password to one that you will easily remember to prevent unauthorised use of your loader. (See Changing The Owner Password on Page 163.) Keep your password in a safe place for future needs.

Change Language: Press the Selection Button at the end of the arrow [Figure 14] to go to the next screen. Use the Keypad to select the number of the language.

Press EXIT. The screen will return to [Figure 14]. You can then enter the password and start the engine.

See CONTROL PANEL SETUP for further description of screens to setup the system for your use. (See CONTROL PANEL SETUP on Page 161.)

NOTE: Pressing the EXIT key will go to the previous screen and you can continue pressing until you get to the initial (home) screen. SHORTCUT: Press the “0” (zero) key to get to the home screen immediately.

### Side Panel

CONTROL IDENTIFICATION

This loader has four control configurations available to operate lift / tilt functions and driving / steering the loader:

- **Standard Controls** - Uses foot pedals for lift and tilt functions. Uses steering levers for driving and steering the loader.

- **Advanced Control System (ACS) (Option)** - Uses a choice of foot pedals or handles for lift and tilt functions. Uses steering levers for driving and steering the loader.

- **Advanced Hand Controls (AHC) (Option)** - Uses handles for lift and tilt functions. Uses steering levers for driving and steering the loader.

- **Selectable Joystick Controls (SJC) (Option)** - Uses joysticks for lift / tilt functions and driving / steering the loader.

**Standard Controls**

* Also used as Attachment Function Control: See your attachment Operation & Maintenance Manual.
The seat bar restraint system has a pivoting seat bar with armrests (Item 1) [Figure 21].

The operator controls the use of the seat bar. The seat bar in the down position helps to keep the operator in the seat.

**WARNING**

_AVOID INJURY OR DEATH_

**WARNING**

_AVOID INJURY OR DEATH_

**WARNING**

**WARNING**

**WARNING**

_AVOID INJURY OR DEATH_

When operating the machine:
- Keep the seat belt fastened snugly.
- The seat bar must be lowered.
- Keep your feet on the pedal controls or footrests and hands on the controls.

When the seat bar is down, the engine is running, the PRESS TO OPERATE LOADER button is activated, and the brake is released, the lift, tilt, and traction drive functions _can_ be operated.

When the seat bar is up, the lift, tilt and traction drive functions are deactivated and both foot pedals (if equipped) will be locked when returned to neutral position.

The seat bar system must deactivate these functions when the seat bar is up. See your Bobcat dealer for service if controls do not deactivate.
The Bobcat Interlock Control System (BICS) has a pivoting seat bar with armrests (Item 1) [Figure 22]. The operator controls the use of the seat bar.

The BICS requires the operator to be seated in the operating position with the seat bar fully lowered before the lift, tilt, auxiliary hydraulics, and traction functions can be operated. The seat belt must be fastened anytime you operate the machine.

When operating the machine:
- Keep the seat belt fastened snugly.
- The seat bar must be lowered.
- Keep your feet on the pedal controls or footrests and hands on the controls.

There are three display lights (Items 1, 2 and 3) [Figure 23] located on the left instrument panel that must be OFF to fully operate the machine.

When the seat bar is lowered, the engine is running, the PRESS TO OPERATE LOADER button is activated, and the parking brake is released, the lift, tilt, auxiliary hydraulics, and traction drive functions can be operated.

When, the seat bar is raised, the lift, tilt, auxiliary hydraulics, and traction drive functions are deactivated.

Before you leave the operator’s seat:
- Lower the lift arms and put the attachment flat on the ground.
- Stop the engine.
- Engage the parking brake.
- Raise the seat bar.
- Move all controls to the NEUTRAL / LOCKED position to make sure the lift, tilt and traction drive functions are deactivated.

The seat bar system must deactivate these functions when the seat bar is up. See your Bobcat dealer for service if controls do not deactivate.
**LIFT ARM BYPASS CONTROL**

**Operation**

**Figure 24**

The lift arm bypass control (Item 1) [Figure 24] is used to lower the lift arms if the lift arms cannot be lowered during normal operations.

1. Sit in the operator's seat.
2. Fasten the seat belt and lower the seat bar.
3. Turn the knob (Item 1) [Figure 24] clockwise 1/4 turn.
4. Pull up and hold the knob until the lift arms lower.

---

**PARKING BRAKE**

**Operation**

**Figure 25**

Press the top of the switch (Item 1) [Figure 25] to engage the parking brake. The red light in the switch will turn on. The traction drive system will be locked.

Press the bottom of the switch (Item 2) [Figure 25] to disengage the parking brake. The red light in the switch will turn off. The traction drive system will be unlocked.

**NOTE:** The PARKING BRAKE light on the left instrument panel will remain ON until the engine is started, the PRESS TO OPERATE LOADER button is pressed and the parking brake is disengaged.
TRACTION LOCK OVERRIDE

Operation

Figure 26

(Functions Only When The Seat Bar Is Raised And The Engine Is Running) There is a TRACTION LOCK OVERRIDE button (Item 1) [Figure 26] on the left instrument panel which will allow you to use the steering levers to move the loader forward and backward when using the backhoe attachment.

- Press the TRACTION LOCK OVERRIDE button once to unlock traction drive. The PARKING BRAKE light (Item 2) [Figure 26] will be OFF.

- Press the button a second time to lock the traction drive. The PARKING BRAKE light (Item 2) [Figure 26] will be ON.

NOTE: The TRACTION LOCK OVERRIDE button will unlock the traction drive when the seat bar is raised and the engine is running.

NOTE: The TRACTION LOCK OVERRIDE button will function if the parking brake is in the engaged or disengaged position and the engine is running. If the parking brake switch is turned ON, the red light in the parking brake switch will turn OFF when TRACTION LOCK OVERRIDE is engaged.
**EMERGENCY EXIT**

The front opening on the operator cab and rear window provide exits.

**Rear Window**

*Figure 27*

Pull on the tag on the top of the rear window to remove the rubber cord [*Figure 27*].

Push the rear window out of the rear of the operator cab.

*Figure 28*

Exit through the rear of the operator cab [*Figure 28*].

**Front Door**

*Figure 29*

Pull the plastic loop at the top of the window in the front door to remove the rubber cord [*Figure 29*].

*Figure 30*

Push the window out with your foot at any corner of the window [*Figure 30*].

Exit through the front door.
BACK-UP ALARM SYSTEM

Description

This machine can be equipped with Back-up Alarm System.

Figure 31

The back-up alarm (Item 1) [Figure 31] is located on the inside of the rear door.

A back-up alarm is not a substitute for looking to the rear when operating the loader in reverse, or for keeping bystanders away from the work area. Operators must always look in the direction of travel, including reverse, and must also keep bystanders away from the work area, even though the loader is equipped with a back-up alarm.

Operators must be trained to always look in the direction of travel, including when operating the loader in reverse and to keep bystanders away from the work area. Other workers should be trained to always keep away from the operator’s work area and travel path.

Operation

WARNING

AVOID INJURY OR DEATH

- Always keep bystanders away from the work area and travel path.
- The operator must always look in the direction of travel.
- The back-up alarm must sound when operating the machine in the reverse direction.

The back-up alarm will sound when the operator moves both steering levers or joystick(s) into the reverse position. Slight movement of the steering levers into the reverse position is required with hydrostatic transmissions, before the back-up alarm will sound.

If alarm does not sound or for adjustment instructions, see inspection and maintenance instructions for the back-up alarm system in the preventive maintenance section of this manual. (See BACK-UP ALARM SYSTEM on Page 119.)
ENGINE SPEED CONTROL

Operation

Figure 32

The engine speed control lever is at the right side of the operator's seat (Item 1) [Figure 32].

Move the lever forward to increase engine speed. Move backward to decrease engine speed.

Figure 33

There is a foot operated engine speed control pedal (Item 1) [Figure 33] in addition to the engine speed control lever on SJC equipped machines. It is located on the right side floor above the footrest.
DRIVING AND STEERING THE LOADER

Available Control Configurations

The loader has four configurations available:

- **Standard Controls** - Two Steering Levers control drive and steering functions.
- **Advanced Control System (ACS) (Option)** - Two Steering Levers control drive and steering functions.
- **Advanced Hand Controls (AHC) (Option)** - Two Steering Levers control drive and steering functions.
- **Selectable Joystick Controls (SJC) (Option)** -
  - (**'ISO' Pattern**) Left joystick controls the drive and steering functions.
  - (**'H' Pattern**) Left and right joysticks control left and right side drive and steering functions.

Operation (Standard, ACS and AHC)

*Figure 34*

The steering levers (Item 1) [*Figure 34*] are on the left and right side in front of the seat.

Move the levers smoothly. Avoid sudden starting and stopping.

*Figure 35*

WARNING

*AVOID INJURY OR DEATH*

When operating the machine:
- Keep the seat belt fastened snugly.
- The seat bar must be lowered.
- Keep your feet on the pedal controls or footrests and hands on the controls.

AVOIDING INJURY OR DEATH
DRIVING AND STEERING THE LOADER (CONT’D)

Operation (SJC) in ‘ISO’ Control Pattern

Figure 36

Select the ‘ISO’ control pattern by pressing the top of the switch (Item 1) [Figure 36].

WARNING

AVOID INJURY OR DEATH

When operating the machine:
- Keep the seat belt fastened snugly.
- The seat bar must be lowered.
- Keep your feet on the foot rests and hands on control levers.

Figure 37

The joystick that controls drive and steering is on the left side in front of the seat (Item 1) [Figure 37].

Move the joystick smoothly. Avoid sudden starting and stopping.

Figure 38

Left Joystick Functions (Drive and Steering) [Figure 38].

1. **Forward Travel** - Move joystick forward.
2. **Backward Travel** - Move joystick backward.
3. **Forward Left Turn** - Move joystick forward and to the left.
4. **Forward Right Turn** - Move joystick forward and to the right.
5. **Backward Left Turn** - Move joystick backward and to the left.
6. **Backward Right Turn** - Move joystick backward and to the right.
7. **Left Fast Turn** - Move joystick to the left.
8. **Right Fast Turn** - Move joystick to the right.
DRIVING AND STEERING THE LOADER (CONT’D)

Operation (SJC) in ‘H’ Control Pattern

Select the ‘H’ control pattern by pressing the bottom of the switch (Item 1) [Figure 39].

WARNING

AVOID INJURY OR DEATH

When operating the machine:
- Keep the seat belt fastened snugly.
- The seat bar must be lowered.
- Keep your feet on the foot rests and hands on control levers.

Both joysticks control drive and steering and are located on the left and right side in front of the seat (Item 1) [Figure 40].

Move the joysticks smoothly. Avoid sudden starting and stopping.

STOPPING THE LOADER

Using The Control Levers Or Joysticks

When the steering levers or joysticks are moved to the neutral position, the hydrostatic transmission will act as a service brake to stop the loader.

Joystick Functions (Drive and Steering) [Figure 41]

1. **Forward Travel** - Move both joysticks forward.
2. **Backward Travel** - Move both joysticks backward.
3. **Forward Left Turn** - Move the right joystick farther forward than the left joystick.
4. **Forward Right Turn** - Move the left joystick farther forward than the right joystick.
5. **Left Fast Turn** - Move the left joystick backward and the right joystick forward.
6. **Right Fast Turn** - Move the left joystick forward and the right joystick backward.
SPEED MANAGEMENT

Speed Management is available on SJC equipped machines.

Operation

Speed Management allows the loader to be maneuvered at a slower travel speed, even during maximum movement of the joystick(s).

This feature can be useful when installing attachments, loading or unloading, and certain applications. (EXAMPLES: Landscaping, tilling, trenching)

Figure 42

Press the button (Item 1) [Figure 42] on the left joystick once to engage Speed Management.

Figure 43

The Speed Management icon (Item 1) [Figure 43] will appear in the display and remain on until the Speed Management button is pressed again or the machine is turned off.

When Speed Management is engaged, the machine will travel at the factory default setting of 57% of Standard Travel Speed and the percentage [SPD 57] will appear in the display (Item 2) [Figure 43].

NOTE: The factory default setting can be changed by the operator. (See Changing The Factory Default Setting on Page 57.)

While Speed Management is engaged, press the top of the Speed Control switch (Item 2) to increase the speed up to 99% [SPD 99] or the bottom of the switch (Item 3) [Figure 42] to decrease the speed down to 1% [SPD 01]. The percentages will appear in the display (Items 2, 3 and 4) [Figure 43].

Press button (Item 1) [Figure 42] again to disengage Speed Management and return to Standard Travel Speed. [STD] (Item 5) [Figure 43] will appear in the display.

The system will retain the speed percentage as long as the key remains ON or the STOP button has not been pressed.

EXAMPLE: You can be using the machine at 40% and then disengage Speed Management to reposition the loader, then re-engage Speed Management. The speed percentage will still be at 40%.

EXAMPLE: Turning the key OFF or pressing the STOP button will return the Speed Management setting to default. The next time you start the engine and engage Speed Management, the speed will be at 57% (factory default setting) or the last default setting saved by the operator. (See Changing The Factory Default Setting on Page 57.)
SPEED MANAGEMENT (CONT’D)

Changing The Factory Default Setting

The Speed Management factory default setting can be changed by the operator to save adjustment time.

EXAMPLE: Your machine is often used for trenching and you prefer a Speed Management setting of 28% of Standard Travel Speed for that application. The Speed Management default setting can be changed to 28% of Standard Travel Speed instead of the factory default setting of 57%. Each time you start the machine and first select Speed Management, the machine will default to 28% of Standard Travel Speed.

Engage Speed management. (See Operation on Page 56.)

Figure 44

Adjust the speed percentage higher (Item 2) or lower (Item 3) [Figure 44] by pressing the Speed Control switch until the desired default setting is displayed.

Press and hold the button (Item 1) [Figure 44] on the left joystick to save the default setting.

Figure 45

The alarm will beep once, display [SET ##] (## will be the percentage you selected) (Item 1) [Figure 45] and remain in Speed Management mode.

Pressing the button (Item 1) [Figure 44] on the left joystick or turning the machine off will disengage Speed Management and return the loader to Standard Travel Speed.

When Speed Management is first selected each time the machine is started, the percentage you selected will be the default setting. Speed Management can still be adjusted from 1% to 99% of Standard Travel Speed.

The default setting can be changed any time the operator chooses.
DRIVE RESPONSE

Drive Response is available on SJC equipped machines.

NOTE: An upgrade to the loader software can be required if this feature does not function as described in this manual. See your Bobcat dealer to update your machine software version if necessary.

Description

Drive Response changes how responsive (more or less) the loader drive and steering systems are when the operator moves the joystick(s).

Drive Response can be changed by the operator for different drive response preferences and various job conditions and attachment use.

NOTE: Changes to drive response do not affect braking or stopping the loader.

There are three drive response settings:

• [DR-1] provides a smooth responsive reaction to joystick movement. (Drive only)

• [DR-2] is the default setting and provides a normal responsive reaction to joystick movement. (Drive only)

• [DR-3] provides a quick responsive reaction to joystick movement. (Drive only)

Operation

NOTE: Changes CANNOT be performed until the seat bar is lowered, the engine is started and the PRESS TO OPERATE LOADER button is pressed to activate the BICS.

Perform pre-starting and starting procedures:

1. Fasten seat belt.
2. Lower seat bar.
3. Place joysticks in neutral position.
4. Start the engine.
5. Press the PRESS TO OPERATE LOADER button.
6. Current drive response setting will be displayed briefly in the data display.

NOTE: Raising the seat bar or changing control mode (ISO / H) will cause the machine to disengage from drive response. The last displayed setting will remain in effect until the STOP button is pressed or the key is turned OFF.
DRIVE RESPONSE (CONT'D)

Operation (Cont'd)

Figure 46

Press and hold the PRESS TO OPERATE LOADER button (Item 1) for three seconds to adjust the loader drive response setting. The current drive response setting will appear in the data display (Item 2) [Figure 46].

Press the upper left button (Item 6) on the left joystick to scroll down through the three settings. Press the upper right button (Item 7) on the left joystick to scroll up through the three drive response settings. The new drive response setting (Item 3, 4 or 5) will appear in the data display (Item 2) [Figure 46]. Adjustments to drive response will be effective immediately.

Figure 47

Saving The Drive Response Setting:

The current drive response setting can be saved by pressing and holding the PRESS TO OPERATE LOADER button (Item 1) for three seconds. [SET] (Item 3) will appear in the data display (Item 2) [Figure 47] and the machine will exit from the drive response adjustment menu.

OR

Press the PRESS TO OPERATE LOADER button to exit from the drive response adjustment menu without saving the current setting.

The current steering drift compensation setting (See STEERING DRIFT COMPENSATION on Page 60.) will appear in the data display (Item 2) [Figure 47] and the upper left and upper right buttons on the left joystick will no longer make changes to drive response.

NOTE: The last displayed drive response setting will remain in effect until the STOP button is pressed or the key is turned OFF. The machine will revert back to the last saved drive response setting the next time it is started.

Adjustments to steering drift compensation can now be made (See STEERING DRIFT COMPENSATION on Page 60.)

OR

Press the PRESS TO OPERATE LOADER button again to exit from the steering drift compensation menu.
STEERING DRIFT COMPENSATION

Steering Drift Compensation is available on SJC equipped machines.

Description

Steering Drift Compensation can be used to reduce steering drift to maintain a desired travel path in both forward and reverse directions.

Examples of applications where this feature can be used:

- To compensate for normal variations such as tyre inflation pressure, track tension, tyre wear and track wear.
- Using side shift attachments such as trenchers, planers and silt fence installers.
- Driving on uneven terrain such as crowned road surfaces.

Figure 48

Operation

NOTE: Changes CANNOT be performed until the seat bar is lowered, the engine is started and the PRESS TO OPERATE LOADER button is pressed to activate the BICS.

Perform pre-starting and starting procedures:

1. Fasten seat belt.
2. Lower seat bar.
3. Place joysticks in neutral position.
4. Start the engine.
5. Press the PRESS TO OPERATE LOADER button.
6. Current drive response setting will be displayed briefly in the data display.

NOTE: Raising the seat bar or changing control mode (ISO / H) will cause the machine to disengage from steering drift compensation. The last displayed setting will remain in effect until the STOP button is pressed or the key is turned OFF.

Steering drift compensation contains a total of 21 settings. Steering drift compensation can be set to any point from neutral to [S-L10] left and from neutral to [S-R10] right. [S----] is displayed when set for neutral [Figure 48].
STEERING DRIFT COMPENSATION (CONT’D)

Operation (Cont’d)

Figure 49

Press and hold the PRESS TO OPERATE LOADER button (Item 1) for three seconds to enter the driver response adjustment menu. Press the PRESS TO OPERATE LOADER button (Item 1) again to adjust the loader steering drift compensation setting. The current steering drift compensation setting will appear in the data display (Item 2) [Figure 49].

Press the upper left button (Item 6) on the left joystick to adjust the machine left. [S-L01] (Item 3) through a maximum of [S-L10] will appear in the data display (Item 2) [Figure 49]. The number will increase by one each time you press the button. The higher the number, the greater the amount of steering drift compensation to the left. Adjustments to steering drift compensation will be effective immediately.

Press the upper right button (Item 7) on the left joystick to adjust back toward centre. The display will decrease down to neutral displayed as [S----] (Item 4). Another press of the upper right button will cause [S-R01] (Item 5) to appear in the data display (Item 2) [Figure 49]. The number will increase by one each time you press the button up to a maximum of [S-R10]. The higher the number, the greater the amount of steering drift compensation to the right. Adjustments to steering drift compensation will be effective immediately.

Figure 50

Saving The Steering Drift Compensation Setting:

The current steering drift compensation setting can be saved by pressing and holding the PRESS TO OPERATE LOADER button (Item 1) for three seconds. [SET] (Item 3) will appear in the data display (Item 2) [Figure 50] and the machine will exit from the steering drift compensation adjustment menu.

OR

Press the PRESS TO OPERATE LOADER button to exit from the steering drift compensation adjustment menu without saving the current setting. [DONE] (Item 4) will appear in the data display (Item 2) [Figure 50] and the upper left and upper right buttons on the left joystick will no longer make changes to steering drift compensation.

NOTE: The last displayed steering drift compensation setting will remain in effect until the STOP button is pressed or the key is turned OFF. The machine will revert back to the last saved setting the next time it is started.
HYDRAULIC CONTROLS

Description

Two foot pedals (or optional hand controls or optional joysticks) control the hydraulic cylinders for the lift and tilt functions.

Put your feet on the pedals (or footrests) and KEEP THEM THERE any time you operate the loader.

Standard Controls (Also ACS In FOOT Pedal Mode)

**Figure 51**

Lift Arm Operation - (Left Pedal)

Push the heel (Item 1) [Figure 51] of the pedal to raise the lift arms.

Push the toe (Item 2) [Figure 51] of the pedal to lower the lift arms.

Lift Arm Float Position - (Left Pedal)

Push the toe (Item 2) [Figure 51] of the pedal all the way forward until it locks into the float position.

Use the float position of the lift arms to level loose material while driving backward.

Raise the lift arms to disengage the float position.

Lift Arm Float Position (With ACS) - (Left Pedal)

Press and hold the Float button (Item 3) [Figure 51].

Push the toe (Item 2) [Figure 51] of the pedal forward to lower the lift arms. Then release the float button.

Use the float position of the lift arms to level loose material while driving backward.

Raise the lift arms to disengage the float position.

**Figure 52**

Tilt Operation - (Right Pedal)

Push the heel (Item 1) [Figure 52] of the pedal to tilt the bucket backward.

Push the toe (Item 2) [Figure 52] of the pedal to tilt the bucket forward.
HYDRAULIC CONTROLS (CONT’D)

Advanced Control System (ACS) In HAND Control Mode And Advanced Hand Controls (AHC)

Figure 53

Lift Arm Operation - (Left Hand Lever)

Move the lever outward (Item 1) [Figure 53] to raise the lift arms.

Move the lever inward (Item 2) [Figure 53] to lower the lift arms.

Lift Arm Float Position - (Left Hand Lever)

Press and hold the Float button (Item 3) while the lever is in neutral. Move the lever to lift arm down position (Item 2) [Figure 53], then release the button.

Press Float button (Item 3) [Figure 53] again or move the lever to lift arm up position to disengage.

Use the float position of the lift arms to level loose material while driving backward.

Figure 54

Tilt Operation - (Right Hand Lever)

Move the lever inward (Item 1) [Figure 54] to tilt the bucket backward.

Move the lever outward (Item 2) [Figure 54] to tilt the bucket forward.

Selectable Joystick Controls (SJC) In ‘ISO’ Control Pattern

Figure 55

Lift Arm Operation - (Right Hand Joystick)

Move the joystick backward (Item 1) [Figure 55] to raise the lift arms.

Move the joystick forward (Item 2) [Figure 55] to lower the lift arms.

Lift Arm Float Position - (Right Hand Joystick)

Press and hold the Float button (Item 3) while the joystick is in neutral. Move the joystick to lift arm down position (Item 2) [Figure 55], then release the button.

Press Float button (Item 3) again or move the joystick to lift arm up position (Item 1) [Figure 55] to disengage.

Use the float position of the lift arms to level loose material while driving backward.

Figure 56

Tilt Operation - (Right Hand Joystick)

Move the joystick inward (Item 1) [Figure 56] to tilt the bucket backward.

Move the joystick outward (Item 2) [Figure 56] to tilt the bucket forward.
HYDRAULIC CONTROLS (CONT’D)

Selectable Joystick Controls (SJC) In ‘H’ Control Pattern

**Figure 57**

**Lift Arm Operation - (Left Hand Joystick)**

Move the joystick outward (Item 1) [*Figure 57*] to raise the lift arms.

Move the joystick inward (Item 2) [*Figure 57*] to lower the lift arms.

**Lift Arm Float Position - (Left and Right Hand Joysticks)**

Press and hold the Float button (Item 3) while the joysticks are in neutral. Move the left joystick to lift arm down position (Item 2) [*Figure 57*], then release the button.

Press Float button (Item 3) [*Figure 57*] again or move the left joystick to lift arm up position to disengage.

Use the float position of the lift arms to level loose material while driving backward.

**Figure 58**

**Tilt Operation - (Right Hand Joystick)**

Move the joystick inward (Item 1) [*Figure 58*] to tilt the bucket backward.

Move the joystick outward (Item 2) [*Figure 58*] to tilt the bucket forward.

**Hydraulic Bucket Positioning**

The function of hydraulic bucket positioning is to keep the bucket in the same approximate position it is in before you begin raising the lift arms.

**Figure 59**

Press the top of the BUCKET POSITIONING switch (Item 1) [*Figure 59*] to engage the bucket positioning function. The amber light in the switch will turn on. Press the bottom of the switch to disengage. The amber light will turn off.

Bucket positioning functions only during upward lift cycle.
HYDRAULIC CONTROLS (CONT'D)

FRONT Auxiliary Hydraulics Operation

Figure 60

Press the auxiliary hydraulics button (Item 1) [Figure 60] once to engage auxiliary hydraulics.

The light (Item 2) [Figure 60] will be ON.

Standard, ACS and AHC (If Equipped)

Figure 61

SJC (If Equipped)

Figure 62

Move the front auxiliary hydraulic switch (Item 1) [Figure 61] or [Figure 62] to the right or left to change the fluid flow direction of the front quick couplers. If you move the switch half-way, the auxiliary functions move at approximately one-half speed; release the switch to stop auxiliary functions. (EXAMPLE: Open and close grapple teeth.)

To disengage, press the auxiliary hydraulics button (Item 1) [Figure 60] again.

The light (Item 2) [Figure 60] will be OFF.

NOTE: When the operator is seated and raises the seat bar, the Auxiliary Hydraulic System (Front and Rear) will deactivate.
HYDRAULIC CONTROLS (CONT'D)

FRONT Auxiliary Hydraulics Operation (CONTINUOUS FLOW)

Standard, ACS and AHC (If Equipped)

**Figure 63**

Press the front switch (Item 2) [Figure 63] and [Figure 64] to give the front quick couplers a constant flow of fluid with the female coupler being pressurised. (EXAMPLE: Operate a backhoe.)

**REVERSE CONTINUOUS FLOW** - To set reverse flow (male coupler pressurised), engage auxiliary hydraulics, then, while holding the auxiliary switch (Item 1) to the left, press the front switch (Item 2) [Figure 63] and [Figure 64].

**NOTE:** Reverse flow can cause damage to some attachments. Use reverse flow with your attachment only if approved. See your attachment Operation & Maintenance Manual for detailed information.

To release from continuous operation, press the front switch (Item 2) [Figure 63] or [Figure 64] a second time.

**NOTE:** When the operator is seated and raises the seat bar, the Auxiliary Hydraulic System (Front and Rear) will deactivate.

SJC (If Equipped)

**Figure 64**

**REAR Auxiliary Hydraulics Operation**

This machine can be equipped with Rear Auxiliary Hydraulics.

**Figure 65**

The switches on the left hand lever or joystick control the rear auxiliary hydraulics.

Press the auxiliary hydraulics button (Item 1) [Figure 65] once to engage auxiliary hydraulics.

The light (Item 2) [Figure 65] will be ON.

**NOTE:** When the operator is seated and raises the seat bar, the Auxiliary Hydraulic System (Front and Rear) will deactivate.

To disengage, press the auxiliary hydraulics button (Item 1) [Figure 65] again.

The light (Item 2) [Figure 65] will be OFF.

**NOTE:** When the operator is seated and raises the seat bar, the Auxiliary Hydraulic System (Front and Rear) will deactivate.
HYDRAULIC CONTROLS (CONT'D)

Secondary Front Auxiliary Hydraulics Operation

This machine can be equipped with Secondary Front Auxiliary Hydraulics.

Figure 67

The secondary front auxiliary quick couplers (Item 1) [Figure 67] are available as a Field Installed Accessory. These are used when there is a need for additional auxiliary hydraulics. (EXAMPLE: Side shift on the Planer.)

Connect the attachment to the secondary front auxiliary hydraulics (Item 1) [Figure 67].

Figure 68

Press the auxiliary hydraulics button (Item 1) [Figure 68] once to engage auxiliary hydraulics.

The light (Item 2) [Figure 68] will be ON.

Standard, ACS and AHC (If Equipped)

Figure 69

SJC (If Equipped)

Figure 70

Push switch (Item 1) [Figure 69] or [Figure 70] to the right or left to change fluid flow direction. (EXAMPLE: Side shift on the Planer.)

NOTE: The secondary front auxiliary hydraulics and the rear auxiliary hydraulics operate from the same auxiliary section of the control valve. To operate an attachment with secondary front auxiliary hydraulics, you must disconnect any attachment connected to the rear auxiliary hydraulic quick couplers.

To disengage, press the auxiliary hydraulics button (Item 1) [Figure 68] again.

The light (Item 2) [Figure 68] will be OFF.

NOTE: When the operator is seated and raises the seat bar, the Auxiliary Hydraulic System (Front and Rear) will deactivate.
HYDRAULIC CONTROLS (CONT’D)

Quick Couplers

WARNING

AVOID INJURY OR DEATH

Diesel fuel or hydraulic fluid under pressure can penetrate skin or eyes, causing serious injury or death. Fluid leaks under pressure may not be visible. Use a piece of cardboard or wood to find leaks. Do not use your bare hand. Wear safety goggles. If fluid enters skin or eyes, get immediate medical attention from a doctor familiar with this injury.

W-2072-EN-0909

Figure 71

To Connect: Remove dirt or debris from the surface of both the male and female couplers, and from the outside diameter of the male coupler. Visually check the couplers for corroding, cracking, damage or excessive wear. If any of these conditions exist, the coupler(s) [Figure 71] must be replaced.

Install the male coupler into the female coupler. Full connection is made when the ball release sleeve slides forward on the female coupler.

To Disconnect: Hold the male coupler. Retract the sleeve on the female coupler until the couplers disconnect.

WARNING

AVOID BURNS

Hydraulic fluid, tubes, fittings and quick couplers can get hot when running machine and attachments. Be careful when connecting and disconnecting quick couplers.

W-2220-0396
HYDRAULIC CONTROLS (CONT’D)

Relieve Auxiliary Hydraulic Pressure (Loader And Attachment)

WARNING
AVOID BURNS
Hydraulic fluid, tubes, fittings and quick couplers can get hot when running machine and attachments. Be careful when connecting and disconnecting quick couplers.

WARNING
AVOID INJURY OR DEATH
Diesel fuel or hydraulic fluid under pressure can penetrate skin or eyes, causing serious injury or death. Fluid leaks under pressure may not be visible. Use a piece of cardboard or wood to find leaks. Do not use your bare hand. Wear safety goggles. If fluid enters skin or eyes, get immediate medical attention from a doctor familiar with this injury.

Front Auxiliary Quick Couplers

When Connecting: Push the quick couplers tightly together and hold for five seconds; the pressure is automatically relieved as the couplers are installed.

When Disconnecting: Push the quick couplers tightly together and hold for five seconds; then retract the sleeve until the couplers disconnect.

Rear Auxiliary and Secondary Front Auxiliary Quick Couplers

Put the attachment flat on the ground.

Stop the engine and turn the key to RUN or press the RUN button.

Press the auxiliary hydraulics button (Item 1) [Figure 72].

Standard, ACS and AHC (If Equipped)

Figure 73

SJC (If Equipped)

Figure 74

Move the rear auxiliary hydraulic switch (Item 1) [Figure 73] or [Figure 74] to the right and left several times.

Turn the key to OFF or press the STOP button.
**ATTACHMENT CONTROL DEVICE (ACD)**

This machine can be equipped with an Attachment Control Device.

**Description**

**Figure 75**

Connect the attachment electrical harness to the attachment control device (Item 1) **[Figure 75]**.

**Figure 76**

You will need the Dual-Connector (7-pin / 14-pin) kit (Item 1) **[Figure 76]** to operate early model attachments. See your Bobcat loader dealer.

**Standard, ACS and AHC (If Equipped)**

**Figure 77**

Additional switches (Items 1, 2 and 3) **[Figure 77]** or **[Figure 78]** on the right and left control handles or joysticks are used to control some attachment functions through the attachment control device.

**NOTE:** ACD takes over the function of auxiliary hydraulic switch (Item 3) **[Figure 77]** or **[Figure 78]** from Rear Auxiliary Hydraulics and Secondary Front Auxiliary Hydraulics when an attachment electrical harness is attached to the ACD.

See the appropriate attachment Operation & Maintenance Manual for control details.
**DAILY INSPECTION**

Figure 79

---

**WARNING**

Avoid Injury or Death

- Keep engine cover of flammable materials.
- Keep away from hot exhaust and electrical components. Do not handle hot pipes and hot parts of the engine. Do not touch engine components while engine is running.
- Remove any items from the engine compartment before starting the engine.
- Never leave the engine running unattended.
- Only use the engine in a well-ventilated area.
- Do not start the engine in a closed space.
- Always wear appropriate protective gear while working on the engine.
- Keep children away from the engine.

---

**SERVICING CHECKLIST AND SCHEDULE**

- Do not work on a vehicle while it is moving.
- Always use a lift or other lifting device when servicing the vehicle.
- Always use appropriate tools and equipment while servicing the vehicle.
- Always follow the manufacturer's guidelines and recommendations.
- Always use the correct lubricants and fluids while servicing the vehicle.
- Always check the vehicle for leaks and damage before servicing.
- Always perform a thorough inspection before and after servicing the vehicle.

---

**GENERAL LUBRICATION DIAGRAMS**

**RADIUS PATH MACHINE**

- Lubricate the steering mechanism and steering components.
- Lubricate the drive train and differential components.
- Lubricate the hydraulic system and hydraulic components.
- Lubricate the brake system and brake components.

**VERTICAL DREASE POINTS**

- Lubricate the vertical grease points.
- Lubricate the vertical grease points.
- Lubricate the vertical grease points.
- Lubricate the vertical grease points.

---

**ENGINE ROOM**

- Lubricate the engine room components.
- Lubricate the engine room components.
- Lubricate the engine room components.
- Lubricate the engine room components.

---

**NOTICE**

- Always follow the manufacturer's guidelines and recommendations.
- Always use the correct lubricants and fluids while servicing the vehicle.
- Always perform a thorough inspection before and after servicing the vehicle.
- Always use appropriate protective gear while working on the engine.
- Always keep children away from the engine.

---

**TECHNICAL SPECIFICATIONS**

- Weight: 2500 kg
- Dimensions: 7x3x2 m
- Engine: 5.0L V8
- Transmission: Automatic

---

**REPAIRS & MAINTENANCE**

- Repair any damage or wear to the vehicle.
- Replace any worn or damaged parts.
- Check all fluid levels and refill as necessary.
- Check all electrical connections and tighten as necessary.
- Check all wheels and tires for proper pressure and tread depth.
- Check all lights and signals for proper function.

---

**S130 Operation & Maintenance Manual**

---

**6734534-V**
DAILY INSPECTION (CONT’D)

Daily Inspection And Maintenance

Maintenance work must be done at regular intervals. Failure to do so will result in excessive wear and early failures. The Service Schedule [Figure 79] is a guide for correct maintenance of the Bobcat loader. It is located inside the rear door of the loader.

- Engine Oil Level
- Hydraulic / Hydrostatic Fluid Level
- Engine Air Filter, Check System for Damage or Leaks
- Engine Coolant Level, Check System for Damage or Leaks
- Operator Cab and Cab Mounting Hardware
- Seat Belt
- Seat Bar and Control Interlocks
- Bobcat Interlock Control System (BICS)
- Front Horn - Check for proper function
- Grease Pivot Pins (Lift Arms, Bob-Tach, Cylinders, Bob-Tach Wedges)
- Tyres, Check for Wear, Damage, Correct Air Pressure
- Fuel Filter, Remove Trapped Water
- Loose or Broken Parts, Repair or Replace as Necessary
- Safety Treads and Safety Signs (Decals), Replace as necessary
- Lift Arm Support Device, Replace if Damaged

WARNING

Operator must have instructions before operating the machine. Untrained operators can cause injury or death.

W-2001-0502

NOTE: Fluids such as engine oil, hydraulic fluid, coolant, etc. must be disposed of in an environmentally safe manner. Some regulations require that certain spills and leaks on the ground must be cleaned in a specific manner. See local regulations for correct disposal.

IMPORTANT

PRESSURE WASHING DECALS

- Never direct the stream at a low angle toward the decal that could damage the decal causing it to peel from the surface.
- Direct the stream at a 90 degree angle and at least 300 mm (12 in) from the decal. Wash from the centre of the decal toward the edges.

I-2226-EN-0910
PRE-STARTING PROCEDURE

Entering The Loader

Use the bucket or attachment steps, grab handles and safety treads (on the loader lift arms and frame) to get on and off the loader [Figure 80]. Do not jump.

Safety treads are installed on the Bobcat loader to provide a slip resistant surface for getting on and off the loader.

Keep safety treads clean and replace when damaged. Replacement treads are available from your Bobcat dealer.

Operation & Maintenance Manual And Operator’s Handbook Locations

Read and understand the Operation & Maintenance Manual and the Operator's Handbook (Item 1) [Figure 81] before operating the loader.

The Operation & Maintenance Manual and other manuals can be kept in a container (Item 2) [Figure 81] provided behind the operator seat.

WARNING

AVOID INJURY OR DEATH

Instructions are necessary before operating or servicing machine. Read and understand the Operation & Maintenance Manual, Operator’s Handbook and signs (decals) on machine. Follow warnings and instructions in the manuals when making repairs, adjustments or servicing. Check for correct function after adjustments, repairs or service. Untrained operators and failure to follow instructions can cause injury or death.
PRE-STARTING PROCEDURE (CONT’D)

Seat Adjustment

Figure 82

Pull the seat lever (Item 1) [Figure 82] out to adjust the seat position for comfortable operation of the loader controls.

Figure 83

Suspension Seat - (Option)

Pull the lever (Item 1) [Figure 83] up to adjust the seat position for comfortable operation of the loader controls.

Pull the lever (Item 2) [Figure 83] up to adjust the angle of the seat back.

Turn the lever (Item 3) [Figure 83] to adjust the seat cushion for weight of the operator.

Air Ride Suspension Seat - (Option)

Figure 84

Turn the knob (Item 1) [Figure 84] to adjust the angle of the seat back.

Turn the knob (Item 2) [Figure 84] to adjust the lumbar support.

Push the knob (Item 3) [Figure 84] in and hold to increase the amount of air in the seat suspension. Pull the knob out and hold to decrease the amount of air in the seat suspension.

NOTE: The loader electrical system must be turned ON to increase the amount of air in the seat suspension.

Pull the lever (Item 4) [Figure 84] up to adjust the seat position for comfortable operation of the loader controls.
PRE-STARTING PROCEDURE (CONT’D)

Seat Belt Adjustment

Figure 85

Squeeze both seat belt adjusters to release and lengthen each half of the seat belt [Figure 85].

Fasten the seat belt.

Pull the ends of the belt through the belt adjusters so that the seat belt is snug and the buckle is centred between your hips [Figure 85].

Figure 86

3-Point Restraint - (Option)

Connect the shoulder belt to the lap belt (Item 1). Pull the lap belt across to the left side of the seat (Item 2) [Figure 86] and fasten.

The shoulder belt must be positioned over your right shoulder and lap belt over your lower hips [Figure 86].

WARNING

AVOID INJURY OR DEATH

When operating the machine:
- Keep the seat belt fastened snugly.
- The seat bar must be lowered.
- Keep your feet on the pedal controls or footrests and hands on the controls.

NOTE: Keep your hands on the steering levers and your feet on the foot pedals (or footrests) while operating the loader.
STARTING THE ENGINE

Standard Key Panel

WARNING

AVOID INJURY OR DEATH

- Engines can have hot parts and hot exhaust gas. Keep flammable material away.
- Do not use machines in atmosphere containing explosive gas.

Perform the PRE-STARTING PROCEDURE. (See PRE-STARTING PROCEDURE on Page 73.)

Figure 88

Set the engine speed control to the idle position [Figure 88].

Figure 89

Turn the key switch to RUN (Item 1) [Figure 89]. The indicator lights on the left instrument panel will come ON briefly and the Instrument Panel / monitoring system will do a self test.

Figure 90

The machine will cycle the air intake heater (glow plugs) automatically based on temperature. The engine preheat icon (Item 1) will be ON and the cycle time remaining will show in the data display (Item 2) [Figure 90].

When the engine preheat icon goes OFF, turn the key switch to START (Item 2). Release the key when the engine starts and allow it to return to the RUN position (Item 1) [Figure 89].

NOTE: Make sure both hand controls (ACS/AHC) or joysticks (SJC) are in the neutral position before starting the engine. Do not move the levers or joysticks from the neutral position when turning the key to RUN or START with the BICS activated.

WARNING

AVOID INJURY OR DEATH

- Fasten seat belt, start and operate only from the operator’s seat.
- Never wear loose clothing when working near machine.

W-2135-1108
STARTING THE ENGINE (CONT’D)

Standard Key Panel (Cont’d)

Figure 91

(ACS) Select hand control or foot pedal operation (Item 1) [Figure 91].

OR

(SJC) Select ‘ISO’ or ‘H’ Control Pattern (Item 2) [Figure 91].

NOTE: (SJ C) The light of the current switch position (ISO or H) will flash, which will indicate PRESS TO OPERATE LOADER is required. The light will flash when the key switch is ON and continue to flash until the PRESS TO OPERATE LOADER button is pressed, thereafter the light will become solid. If the mode (ISO / H) is changed while driving, the active mode light will remain solid and the pending mode light will flash. When operation of the machine is returned to neutral, the active mode light will then turn off and the pending mode light will continue to flash until the PRESS TO OPERATE LOADER button is pressed.

WARNING

AVOID INJURY OR DEATH

When an engine is running in an enclosed area, fresh air must be added to avoid concentration of exhaust fumes. If the engine is stationary, vent the exhaust outside. Exhaust fumes contain odorless, invisible gases which can kill without warning.

W-2050-0807

Figure 92

Press the PRESS TO OPERATE LOADER button (Item 1) [Figure 92] to activate the BICS™ and to perform hydraulic and loader functions.

(SJC) The current drive response setting will be displayed briefly in the data display (Item 2) each time the PRESS TO OPERATE LOADER button (Item 1) [Figure 92] is pressed.
STARTING THE ENGINE (CONT’D)

Keyless Start Panel

WARNING

AVOID INJURY OR DEATH

- Engines can have hot parts and hot exhaust gas. Keep flammable material away.
- Do not use machines in atmosphere containing explosive gas.

Perform the PRE-STARTING PROCEDURE. (See PRE-STARTING PROCEDURE on Page 73.)

Figure 93

Set the engine speed control to the idle position [Figure 93]

NOTE: Loaders with a Keyless Start Panel have a permanent, randomly generated Master Password set at the factory. Your loader will have an Owner Password. The password can be changed to prevent unauthorised use of your loader. (See Changing The Owner Password on Page 163.) Keep your password in a safe place for future needs.

NOTE: The Password Lockout feature can be used to allow starting of the loader without a password. (See Password Lockout Feature on Page 163.)

Figure 94

Press the RUN button (Item 3) [Figure 94].

Use the numeric keypad (Item 1) to enter the password, then press the RUN button (Item 3) [Figure 94].

Figure 95

The machine will cycle the air intake heater (glow plugs) automatically based on temperature. The engine preheat icon (Item 1) will be ON and the cycle time remaining will show in the data display (Item 2) [Figure 95].

When the engine preheat icon goes OFF, press the START button (Item 2) [Figure 94]. Release the button when the engine starts.
STARTING THE ENGINE (CONT'D)

Keyless Start Panel (Cont’d)

NOTE: Make sure both hand controls (ACS/AHC) or joysticks (SJC) are in the neutral position before starting the engine. Do not move the levers or joysticks from the neutral position when pressing the RUN / ENTER or START buttons with the BICS activated.

ACS

FRONT PANEL

1

SJC

2

(ACS) Select hand control or foot pedal operation (Item 1) [Figure 96].

OR

(SJC) Select ‘ISO’ or ‘H’ Control Pattern (Item 2) [Figure 96].

Figure 97

Press the PRESS TO OPERATE LOADER button (Item 1) [Figure 97] to activate the BICS and to perform hydraulic and loader functions.

(SJC) The current drive response setting will be displayed briefly in the data display (Item 2) each time the PRESS TO OPERATE LOADER button (Item 1) [Figure 97] is pressed.

NOTE: (SJC) The light of the current switch position (ISO or H) will flash, which will indicate PRESS TO OPERATE LOADER is required. The light will flash when the RUN button has been pressed and continue to flash until the PRESS TO OPERATE LOADER button is pressed, thereafter the light will become solid. If the mode (ISO / H) is changed while driving, the active mode light will remain solid and the pending mode light will flash. When operation of the machine is returned to neutral, the active mode light will then turn off and the pending mode light will continue to flash until the PRESS TO OPERATE LOADER button is pressed.

WARNING

AVOID INJURY OR DEATH

When an engine is running in an enclosed area, fresh air must be added to avoid concentration of exhaust fumes. If the engine is stationary, vent the exhaust outside. Exhaust fumes contain odorless, invisible gases which can kill without warning.

W-2050-0807
STARTING THE ENGINE (CONT’D)

Deluxe Instrumentation Panel

WARNING

AVOID INJURY OR DEATH

- Engines can have hot parts and hot exhaust gas. Keep flammable material away.
- Do not use machines in atmosphere containing explosive gas.

Perform the PRE-STARTING PROCEDURE. (See PRE-STARTING PROCEDURE on Page 73.)

Figure 98

Set the engine speed control to the idle position [Figure 98]

NOTE: Loaders with a Deluxe Instrumentation Panel have a permanent, randomly generated Master Password set at the factory. Your loader will be assigned an Owner Password. Your dealer will provide you with this password. Change the password to one that you will easily remember to prevent unauthorised use of your loader. (See Changing The Owner Password on Page 163.) Keep your password in a safe place for future needs.

NOTE: The Password Lockout feature can be used to allow starting of the loader without a password. (See Password Lockout Feature on Page 163.)

Press the RUN / ENTER button (Item 3) [Figure 99]. Use the numeric keypad (Item 1) to enter the password, then press the RUN / ENTER button (Item 3) [Figure 99].

Figure 100

The machine will cycle the air intake heater (glow plugs) automatically based on temperature. The engine preheat icon (Item 1) will be ON and the cycle time remaining will show in the data display (Item 2) [Figure 100].

When the engine preheat icon goes OFF, press the START button (Item 2) [Figure 99]. Release the button when the engine starts.
**STARTING THE ENGINE (CONT’D)**

Deluxe Instrumentation Panel (Cont’d)

**NOTE:** Make sure both hand controls (ACS/AHC) or joysticks (SJC) are in the neutral position before starting the engine. Do not move the levers or joysticks from the neutral position when pressing the RUN / ENTER or START buttons with the BICS activated.

**OR**

(SJC) Select ‘ISO’ or ‘H’ Control Pattern (Item 2) [Figure 101].

![Figure 102]( SJC)

**Figure 102**

Press the PRESS TO OPERATE LOADER button (Item 1) [Figure 102] to activate the BICS and to perform hydraulic and loader functions. (SJC) The current drive response setting will be displayed briefly in the data display (Item 2) each time the PRESS TO OPERATE LOADER button (Item 1) [Figure 102] is pressed.

**NOTE:** (SJC) The light of the current switch position (ISO or H) will flash, which will indicate PRESS TO OPERATE LOADER is required. The light will flash when the RUN button has been pressed and continue to flash until the PRESS TO OPERATE LOADER button is pressed, thereafter the light will become solid. If the mode (ISO / H) is changed while driving, the active mode light will remain solid and the pending mode light will flash. When operation of the machine is returned to neutral, the active mode light will then turn off and the pending mode light will continue to flash until the PRESS TO OPERATE LOADER button is pressed.

---

**WARNING**

**AVOID INJURY OR DEATH**

When an engine is running in an enclosed area, fresh air must be added to avoid concentration of exhaust fumes. If the engine is stationary, vent the exhaust outside. Exhaust fumes contain odorless, invisible gases which can kill without warning.

W-2050-0807
STARTING THE ENGINE (CONT’D)

Cold Temperature Starting

**WARNING**

**AVOID INJURY OR DEATH**

Do not use ether with glow plug (preheat) systems. Explosion can result which can cause injury, death, or severe engine damage.

If the temperature is below freezing, perform the following to make starting the engine easier:

- Replace the engine oil with the correct type and viscosity for the anticipated starting temperature. (See Engine Oil Chart on Page 130.)

- Make sure the battery is fully charged.

- Install an engine heater, available from your Bobcat loader dealer.

- Move engine speed control lever halfway before starting. Return to idle position after the engine starts.

**NOTE:** The display screen of the Deluxe Instrumentation Panel can not be immediately visible when the temperature is below -26°C (-15°F). It can take 30 seconds to several minutes for the display screen to warm up. All systems remain monitored even when the display screen is off.

Warming The Hydraulic / Hydrostatic System

**IMPORTANT**

When the temperature is below -30°C (-20°F), hydrostatic oil must be warmed before starting. The hydrostatic system will not get enough oil at low temperatures and will be damaged. Park the machine in an area where the temperature will be above -18°C (0°F) if possible.

Let the engine run for a minimum of five minutes to warm the engine and hydrostatic transmission fluid before operating the loader.
MONITORING THE DISPLAY PANELS

Left Panel

Figure 103

Frequently monitor the temperature and fuel gauges and BICS™ lights (all BICS™ lights must be OFF to operate loader) [Figure 103].

After the engine is running, frequently monitor the left instrument panel [Figure 103] for error conditions. The associated icon will be ON if there is an error condition.

EXAMPLE: Engine Coolant Temperature is High

The Engine Over-Temperature icon (Item 1) [Figure 103] will be ON.

Press the Information button (Item 2) [Figure 103] to cycle the data display until the service code screen is displayed. One of the following SERVICE CODES will be displayed.

- **M0810** Engine Coolant Temperature High
- **M0811** Engine Coolant Temperature Extremely High

Find the cause of the error code and correct before operating the loader again. (See Service Codes List on Page 156.)

Warning And Shutdown

When a WARNING condition exists, the associated icon light will come ON and there will be 3 beeps from the alarm. If this condition is allowed to continue, there can be damage to the engine or loader hydraulic systems.

When a SHUTDOWN condition exists, the associated icon light will come ON and there will be a continuous beep from the alarm. The monitoring system will automatically stop the engine in 15 seconds. The engine can be restarted to move or relocate the loader.

The SHUTDOWN feature is associated with the following icons:

- General Warning
- Engine Malfunction
- Engine Coolant Temperature
- Hydraulic System Malfunction
STOPPING THE ENGINE AND LEAVING THE LOADER

Procedure

Stop the loader on level ground.

Fully lower the lift arms and put the attachment flat on the ground.

Pull the engine speed control fully backward [Figure 104] to decrease the engine speed.

Engage the parking brake.

Figure 105

Turn the key switch to the STOP position (Item 1) or press the STOP button (Item 2) [Figure 105].

NOTE: If the loader lights are ON, they will remain ON for approximately 90 seconds after turning the loader OFF.

Raise the seat bar and make sure the lift and tilt functions are deactivated.

Unbuckle the seat belt.

Remove the key from the switch (Standard Key Panel) to prevent operation of the loader by unauthorised personnel.

WARNING

AVOID INJURY OR DEATH

Before you leave the operator’s seat:

- Lower the lift arms and put the attachment flat on the ground.
- Stop the engine.
- Engage the parking brake.
- Raise the seat bar.
- Move all controls to the NEUTRAL / LOCKED position to make sure the lift, tilt and traction drive functions are deactivated.

The seat bar system must deactivate these functions when the seat bar is up. See your Bobcat dealer for service if controls do not deactivate.

NOTE: Activating the Password Lockout Feature on machines with the Keyless Start Panel or the Deluxe Instrumentation Panel allows operation of the loader without using a password. (See Password Lockout Feature on Page 163.) or (See Password Lockout Feature on Page 165.)

Figure 106

Exit the loader using grab handles, safety tread and steps (maintaining a 3-point contact) [Figure 106].
COUNTERWEIGHTS

Description

Counterweights can be installed on the loader. See your Bobcat dealer for information about approved loader counterweights and configurations for your job application and attachment.

Effect On The Loader And Loader Operation

Proper operation of the loader and attachment does not change if counterweights are installed on this loader. Always follow the instructions provided in this manual when operating your loader with counterweights installed.

Counterweights installed on your loader can affect the loader and its operation in some applications. Some examples are:

- Increased machine weight.
- Increased Rated Operating Capacity (ROC).
- Harder steering.
- Accelerated or uneven tyre wear.
- Increased power consumption.

When To Consider Using Counterweights

Install counterweights to increase the loader Rated Operating Capacity (ROC) which could improve attachment performance in some applications. Some examples are:

- Using pallet forks with palletized loads.
- Using grapples or bale forks.
- Using buckets to handle loose material without digging.

When To Consider Removing Counterweights

Remove counterweights to increase the downward force of the attachment for better attachment performance in some applications. Some examples are:

- Digging with buckets.
- Using Hydraulic Breakers, Scrapers or Landplanes.

Accessories That Affect Machine Weight

If your loader is already equipped with accessories like Over Tyre Steel Tracks, Water Tanks or Rear Stabilizers, installing counterweights can not be necessary.

See your Bobcat dealer for more information about the proper use of counterweights with your attachments and accessories.
ATTACHMENTS
Choosing The Correct Bucket

WARNING
AVOID INJURY OR DEATH
Never use attachments or buckets which are not approved by Bobcat Company. Buckets and attachments for safe loads of specified densities are approved for each model. Unapproved attachments can cause injury or death.

NOTE: Warranty is void if non-approved attachments are used on the Bobcat loader.

The dealer can identify, for each model loader, the attachments and buckets approved by Bobcat. The buckets and attachments are approved for Rated Operating Capacity (ROC) and for secure fastening to the Bob-Tach.

The ROC for this loader is shown on a decal in the operator cab. (See Performance on Page 170.)

The ROC is determined by using a bucket and material of normal density, such as dirt or dry gravel. If longer buckets are used, the load centre moves forward and reduces the ROC. If very dense material is loaded, the volume must be reduced to prevent overloading.

Figure 107

Exceeding the ROC [Figure 107] can cause the following problems:

- Steering the loader can be difficult.
- Tyres will wear faster.
- There will be a loss of stability.
- The life of the Bobcat loader will be reduced.

Figure 108

Load varies with model of pallet fork being used.

The maximum load to be carried when using a pallet fork is shown on a decal located on the pallet fork frame (Item 1) [Figure 108].

See your Bobcat dealer for more information about pallet fork inspection, maintenance and replacement. See your Bobcat dealer for ROC when using a pallet fork and for other available attachments.

WARNING
AVOID INJURY OR DEATH
Do not exceed Rated Operating Capacity (ROC). Excessive load can cause tipping or loss of control.

Exceeding the ROC [Figure 107] can cause the following problems:
ATTACHMENTS (CONT'D)

Installing And Removing The Attachment (Hand Lever Bob-Tach)

The Bob-Tach is used for fast changing of buckets and attachments. See the appropriate attachment Operation & Maintenance Manual to install other attachments.

![Figure 109](image)

**Installing**

Pull the Bob-Tach levers all the way up (Item 1) [Figure 109].

Enter the loader and perform the PRE-STARTING PROCEDURE. (See PRE-STARTING PROCEDURE on Page 73.)

Start the engine, press the PRESS TO OPERATE LOADER button and release the parking brake.

Lower the lift arms and tilt the Bob-Tach forward.

Drive the loader forward until the top edge of the Bob-Tach is completely under the top flange of the bucket [Figure 109] (or other attachment). Be sure the Bob-Tach levers do not hit the bucket.

**Figure 110**

Tilt the Bob-Tach backward until the cutting edge of the bucket (or other attachment) is slightly off the ground to ensure the mounting frame is tight to the Bob-Tach [Figure 110].

Stop the engine and exit the loader. (See STOPPING THE ENGINE AND LEAVING THE LOADER on Page 84.)

**WARNING**

**AVOID INJURY OR DEATH**

Before you leave the operator’s seat:
- Lower the lift arms and put the attachment flat on the ground.
- Stop the engine.
- Engage the parking brake.
- Raise the seat bar.
- Move all controls to the NEUTRAL / LOCKED position to make sure the lift, tilt and traction drive functions are deactivated.

The seat bar system must deactivate these functions when the seat bar is up. See your Bobcat dealer for service if controls do not deactivate.

W-2463-1110
ATTACHMENTS (CONT’D)

Installing And Removing The Attachment (Hand Lever Bob-Tach) (Cont’d)

Installing (Cont’d)

**Figure 111**

Push down on the Bob-Tach levers until they are fully engaged in the locked position (Item 1) ([Figure 111]) (wedges fully extended).

**Figure 112**

The wedges (Item 1) must extend through the holes (Item 2) ([Figure 112]) in the mounting frame of the bucket (or other attachment), securely fastening the bucket to the Bob-Tach.

---

**WARNING**

**AVOID INJURY OR DEATH**

The Bob-Tach wedges must extend through the holes in the attachment mounting frame. Levers must be fully down and locked. Failure to secure wedges can allow attachment to come off.

W-2715-0208

Removing

Lower the lift arms and put the attachment flat on the ground. Lower or close any hydraulic equipment, if applicable.

Stop the engine and exit the loader. (See STOPPING THE ENGINE AND LEAVING THE LOADER on Page 84.)

**WARNING**

**AVOID INJURY OR DEATH**

Before you leave the operator’s seat:

- Lower the lift arms and put the attachment flat on the ground.
- Stop the engine.
- Engage the parking brake.
- Raise the seat bar.
- Move all controls to the NEUTRAL / LOCKED position to make sure the lift, tilt and traction drive functions are deactivated.

The seat bar system must deactivate these functions when the seat bar is up. See your Bobcat dealer for service if controls do not deactivate.

W-2463-1110

Disconnect attachment electrical harness, water line and hydraulic lines, if applicable, from the loader. (See Relieve Auxiliary Hydraulic Pressure (Loader And Attachment) on Page 69.)
ATTACHMENTS (CONT’D)

Installing And Removing The Attachment (Hand Lever Bob-Tach) (Cont’d)

Removing (Cont’d)

**Figure 113**

Pull the Bob-Tach levers **[Figure 113]** all the way up.

**WARNING**

Bob-Tach levers have spring tension. Hold levers tightly and release slowly. Failure to obey warning can cause injury.

Enter the loader.

Perform the PRE-STARTING PROCEDURE. (See PRE-STARTING PROCEDURE on Page 73.)

Start the engine, press the PRESS TO OPERATE LOADER button and release the parking brake.

**Figure 114**

Tilt the Bob-Tach forward and move the loader backward, away from the bucket or attachment **[Figure 114]**.

Installing And Removing The Attachment (Power Bob-Tach)

This machine can be equipped with a Power Bob-Tach.

Installing

The Bob-Tach is used for fast changing of buckets and attachments. See the appropriate attachment Operation & Maintenance Manual to install other attachments.

Perform the PRE-STARTING PROCEDURE. (See PRE-STARTING PROCEDURE on Page 73.)

Start the engine, press the PRESS TO OPERATE LOADER button and release the parking brake.

Lower the lift arms and tilt the Bob-Tach forward.

**Figure 115**

Push and hold BOB-TACH “WEDGES UP” switch (Item 1) (Front Panel) until levers (Item 2) **[Figure 115]** are in unlocked position (wedges fully raised).

**Figure 116**

Drive the loader forward until the top edge of the Bob-Tach is completely under the top flange of the bucket **[Figure 116]** (or other attachment). Be sure the Bob-Tach levers do not hit the bucket.
ATTACHMENTS (CONT'D)

Installing And Removing The Attachment (Power Bob-Tach) (Cont’d)

Installing (Cont’d)

Figure 117

Tilt the Bob-Tach backward until the cutting edge of the bucket (or other attachment) is slightly off the ground [Figure 117].

Push and hold BOB-TACH “WEDGES UP” switch (Item 1) [Figure 115] (Front Panel) to make sure the levers are all the way up.

NOTE: The Power Bob-Tach system has continuous pressurised hydraulic oil to keep the wedges in the engaged position and prevent attachment disengagement. Because the wedges can slowly lower, the operator can need to reactivate the switch (WEDGES UP) to be sure both wedges are fully raised before installing the attachment.

Figure 118

Push and hold BOB-TACH “WEDGES DOWN” switch (Front Panel) (Item 1) until levers are fully engaged in the locked position (Item 2) [Figure 118] (wedges fully engaged).

The wedges (Item 3) [Figure 118] must extend through the holes in the mounting frame of the bucket (or other attachment), securely fastening the bucket to the Bob-Tach.

WARNING

AVOID INJURY OR DEATH
The Bob-Tach wedges must extend through the holes in the attachment mounting frame. Levers must be fully down and locked. Failure to secure wedges can allow attachment to come off.

W-2715-0208
ATTACHMENTS (CONT’D)

Installing And Removing The Attachment (Power Bob-Tach) (Cont’d)

Removing

Lower the lift arms and put the attachment flat on the ground. Lower or close any hydraulic equipment, if applicable.

If the attachment has electrical, water or hydraulic connections to the loader:

1. Stop the engine and exit the loader. (See STOPPING THE ENGINE AND LEAVING THE LOADER on Page 84.)

   WARNING

   AVOID INJURY OR DEATH

   Before you leave the operator’s seat:
   - Lower the lift arms and put the attachment flat on the ground.
   - Stop the engine.
   - Engage the parking brake.
   - Raise the seat bar.
   - Move all controls to the NEUTRAL / LOCKED position to make sure the lift, tilt and traction drive functions are deactivated.

   The seat bar system must deactivate these functions when the seat bar is up. See your Bobcat dealer for service if controls do not deactivate.

2. Disconnect attachment electrical harness and water or hydraulic lines, if applicable, from the loader. (See Relieve Auxiliary Hydraulic Pressure (Loader And Attachment) on Page 69.)

3. Perform the PRE-STARTING PROCEDURE. (See PRE-STARTING PROCEDURE on Page 73.)

4. Start the engine, press the PRESS TO OPERATE LOADER button and release the parking brake.

---

Figure 119

Push and hold the BOB-TACH “WEDGES UP” switch (Front Panel) (Item 1) [Figure 119] until the wedges are fully raised.

Figure 120

Tilt the Bob-Tach forward and move the loader backward, away from the bucket or attachment [Figure 120].

NOTE: The Power Bob-Tach system has continuous pressurised hydraulic oil to keep the wedges in the engaged position and prevent attachment disengagement. Because the wedges can slowly lower, the operator can need to reactivate the switch (WEDGES UP) when removing an attachment to be sure both wedges are fully raised.
OPERATING PROCEDURE

Inspect The Work Area

Before beginning operation, inspect the work area for unsafe conditions.

Look for sharp drop-offs or rough terrain. Have underground utility lines (gas, water, sewer, irrigation, etc.) located and marked.

Remove objects or other construction material that could damage the loader or cause personal injury.

Always check ground conditions before starting your work:

- Inspect for signs of instability such as cracks or settlement.

- Be aware of weather conditions that can affect ground stability.

- Check for adequate traction if working on a slope.

Basic Operating Instructions

Always warm the engine and hydrostatic system before operating the loader.

Operate the loader with engine at full speed for maximum horsepower. Move the steering levers only a small amount to operate the loader slowly.

New operators must operate the loader in an open area without bystanders. Operate the controls until the loader can be handled at an efficient and safe rate for all conditions of the work area.

Operating Near An Edge Or Water

Keep the loader as far back from the edge as possible and the loader wheels perpendicular to the edge so that if part of the edge collapses, the loader can be moved back.

MACHINES WARMED UP WITH MODERATE ENGINE SPEED AND LIGHT LOAD HAVE LONGER LIFE.

W-2018-1109

WARNING

MACHINE TIPPING OR ROLL OVER CAN CAUSE SERIOUS INJURY OR DEATH

- Keep the lift arms as low as possible.
- Do not travel or turn with the lift arms up.
- Turn on level ground. Slow down when turning.
- Go up and down slopes, not across them.
- Keep the heavy end of the machine uphill.
- Do not overload the machine.
- Check for adequate traction.

Driving On Public Roads

When driving on a public road or motorway, always follow local regulations. For example: Slow Moving Vehicle Sign or direction signals can be required.

NOTE: Road kits are available from your Bobcat dealer to equip your machine for driving on public roads in European Union (EU) countries.

Always follow local regulations. For more information, contact your local Bobcat dealer.
Operating With A Full Bucket

With a full bucket, go up or down the slope with the heavy end toward the top of the slope [Figure 121] and [Figure 122].

Operating With An Empty Bucket

With an empty bucket, go down or up the slope with the heavy end toward the top of the slope [Figure 123] and [Figure 124].

Raise the bucket only high enough to avoid obstructions on rough ground.
OPERATING PROCEDURE (CONT’D)

Filling And Emptying The Bucket (Foot Pedals)

Filling

Figure 125

Lower the lift arms all the way (Item 1) [Figure 125].

Tilt the bucket forward (Item 2) [Figure 125] until the cutting edge of the bucket is on the ground.

Drive slowly forward into the material. Tilt the bucket backward (Item 1) [Figure 126] all the way when the bucket is full.

Drive backward away from the material.

WARNING

Load, unload and turn on flat level ground. Do not exceed Rated Operating Capacity (ROC) shown on sign (decal) in cab. Failure to obey warnings can cause the machine to tip or roll over and cause injury or death.

W-2056-0903

Emptying

Figure 127

Keep the bucket low when moving to the area where you want to empty the bucket.

Raise the lift arms (Item 1). Level the bucket (Item 2) [Figure 127] while raising the lift arms to help prevent material from falling off the back of the bucket.

Drive forward slowly until the bucket is over the top of the truck box or bin.

Empty the bucket (Item 2) [Figure 127]. If all the material is near the side of the truck or bin, use the bucket tilt to move it to the other side.

WARNING

Never dump over an obstruction, such as a post, that can enter the operator cab. The machine could tip forward and cause injury or death.

W-2057-0694
OPERATING PROCEDURE (CONT’D)

Leveling The Ground Using Float (Foot Pedals)

Figure 128

Put the lift arms in float position by pushing the pedal all the way forward (Item 1) [Figure 128] until the pedal is locked in the forward position.

Tilt the bucket forward (Item 2) [Figure 128] to change the position of the cutting edge of the bucket.

With the bucket tilted farther forward, there is more force on the cutting edge and more loose material can be moved.

Drive backward to level loose material.

Push the bottom of the lift pedal (Item 3) [Figure 128] to unlock the float position.

IMPORTANT

Never drive forward when the hydraulic control for lift arms is in float position.

I-2005-1285

Digging And Filling A Hole (Foot Pedals)

Digging

Figure 129

Lower the lift arms all the way (Item 1). Put the cutting edge of the bucket on the ground (Item 2) [Figure 129].

Drive forward slowly and continue to tilt the bucket down (Item 2) [Figure 129] until it enters the ground.

Raise the cutting edge a small amount (Item 3) to increase traction and keep an even digging depth. Continue to drive forward until the bucket is full. When the ground is hard, raise and lower the cutting edge of the bucket (Items 2 and 3) [Figure 129] while driving forward slowly.

Filling

Figure 131

Lower the lift arms (Item 1) and put the cutting edge of the bucket on the ground (Item 2) [Figure 131]. Drive forward to the edge of the hole to push the material into the hole.

Tilt the bucket backward (Item 1) [Figure 130] as far as it will go when the bucket is full.

If necessary, raise the lift arms to empty the bucket.
OPERATING PROCEDURE (CONT’D)

Filling And Emptying The Bucket (ACS - Handles, AHC - Handles And SJC - ‘H’ Pattern)

Filling

Figure 132

Lower the lift arms all the way (Item 1) [Figure 132].

Tilt the bucket forward (Item 2) [Figure 132] until the cutting edge of the bucket is on the ground.

Drive slowly forward into the material. Tilt the bucket backward (Item 1) [Figure 133] all the way when the bucket is full.

Drive backward away from the material.

WARNING
Load, unload and turn on flat level ground. Do not exceed Rated Operating Capacity (ROC) shown on sign (decal) in cab. Failure to obey warnings can cause the machine to tip over and cause injury or death.

Figure 133

Emptying

Figure 134

Keep the bucket low when moving to the area where you want to empty the bucket.

Raise the lift arms (Item 1). Level the bucket (Item 2) [Figure 134] while raising the lift arms to help prevent material from falling off the back of the bucket.

Drive forward slowly until the bucket is over the top of the truck box or bin.

Empty the bucket (Item 2) [Figure 134]. If all material is near the side of the truck or bin, use the bucket tilt to move it to the other side.

WARNING
Never dump over an obstruction, such as a post, that can enter the operator cab. The machine could tip forward and cause injury or death.

W-2057-0694
OPERATING PROCEDURE (CONT'D)

Leveling The Ground Using Float (ACS - Handles, AHC - Handles And SJC - 'H' Pattern)

Figure 135

Press and hold the float button (Item 1) while the lever is in neutral. While lowering the lift arms (Item 2) [Figure 135], release the float button.

Tilt the bucket forward (Item 3) [Figure 135] to change the position of the cutting edge of the bucket.

With the bucket tilted farther forward, there is more force on the cutting edge and more loose material can be moved.

Drive backward to level loose material.

To disengage float, press the float button again or raise the lift arms (Item 4) [Figure 135].

IMPORTANT

Never drive forward when the hydraulic control for lift arms is in float position.
OPERATING PROCEDURE (CONT’D)

Digging And Filling A Hole (ACS - Handles, AHC - Handles And SJC - ‘H’ Pattern)

Digging

**Figure 136**

Lower the lift arms all the way (Item 1). Tilt the bucket forward (Item 2) until the cutting edge of the bucket is on the ground.

Drive forward slowly and continue to tilt the bucket down (Item 2) until it enters the ground.

Tilt the bucket backward a small amount (Item 3) to increase traction and keep an even digging depth. Continue to drive forward until the bucket is full. When the ground is hard, raise and lower the cutting edge (Items 2 and 3) [Figure 136] while driving forward.

**Figure 137**

Tilt the bucket backward (Item 1) [Figure 137] as far as it will go when the bucket is full.

Filling

**Figure 138**

Lower the lift arms (Item 1) and put the cutting edge of the bucket on the ground (Item 2) [Figure 138]. Drive forward to the edge of the hole to push the material into the hole.

Tilt the bucket forward (Item 2) [Figure 138] as soon as it is past the edge of the hole.

If necessary, raise the lift arms to empty the bucket.
OPERATING PROCEDURE (CONT’D)

Filling And Emptying The Bucket (SJC - ‘ISO’ Pattern)

Filling

Figure 139

Lower the lift arms all the way (Item 1) [Figure 139].

Tilt the bucket forward (Item 2) [Figure 139] until the cutting edge of the bucket is on the ground.

Drive slowly forward into the material. Tilt the bucket backward (Item 1) [Figure 140] all the way when the bucket is full.

Drive backward away from the material.

Emptying

Figure 141

Keep the bucket low when moving to the area where you want to empty the bucket.

Raise the lift arms (Item 1). Level the bucket (Item 2) [Figure 141] while raising the lift arms to help prevent material from falling off the back of the bucket.

Drive forward slowly until the bucket is over the top of the truck box or bin.

Empty the bucket (Item 2) [Figure 141]. If all material is near the side of the truck or bin, use the bucket tilt to move it to the other side.

WARNING

Never dump over an obstruction, such as a post, that can enter the operator cab. The machine could tip forward and cause injury or death.

W-2057-0694

Load, unload and turn on flat level ground. Do not exceed Rated Operating Capacity (ROC) shown on sign (decal) in cab. Failure to obey warnings can cause the machine to tip or roll over and cause injury or death.

W-2056-0903
OPERATING PROCEDURE (CONT’D)

Leveling The Ground Using Float (SJC - ‘ISO’ Pattern)

Figure 142

Press and hold the float button (Item 1) while the joystick is in neutral. While lowering the lift arms (Item 2) [Figure 142], release the float button.

Tilt the bucket forward (Item 3) [Figure 142] to change the position of the cutting edge of the bucket.

With the bucket tilted farther forward, there is more force on the cutting edge and more loose material can be moved.

Drive backward to level loose material.

To disengage, press the float button again or raise the lift arms (Item 4) [Figure 142].

IMPORTANT

Never drive forward when the hydraulic control for lift arms is in float position.

I-2005-1285

Digging And Filling A Hole (SJC - ‘ISO’ Pattern)

Digging

Figure 143

Lower the lift arms all the way (Item 1). Put the cutting edge of the bucket on the ground (Item 2) [Figure 143].

Drive forward slowly and continue to tilt the bucket down (Item 2) [Figure 143] until it enters the ground.

Raise the cutting edge a small amount (Item 3) to increase traction and keep an even digging depth. Continue to drive forward until the bucket is full. When the ground is hard, raise and lower the cutting edge (Items 2 and 3) [Figure 143] while driving forward.

Tilt the bucket backward (Item 3) [Figure 143] as far as it will go when the bucket is full.

Filling

Figure 144

Lower the lift arms (Item 1) and put the cutting edge of the bucket on the ground (Item 2) [Figure 144]. Drive forward to the edge of the hole to push the material into the hole.

Tilt the bucket forward (Item 2) [Figure 144] as soon as it is past the edge of the hole.

If necessary, raise the lift arms to empty the bucket.
TOWING THE LOADER

Procedure

Because of the design of the loader, there is not a recommended towing procedure.

- The loader can be lifted onto a transport vehicle.
- The loader can be skidded a short distance to move for service (EXAMPLE: Move onto a transport vehicle.) without damage to the hydrostatic system. (The tyres will not turn.) There might be slight wear to the tyres when the loader is skidded.

The towing chain (or cable) must be rated at 1.5 times the weight of the loader. (See Performance on Page 170.)
LIFTING THE LOADER

Single Point Lift

**WARNING**

- AVOID INJURY OR DEATH
- Before lifting, check fasteners on single point lift and operator cab.
- Assemble front cab fasteners as shown in this manual.
- Never allow riders in the cab or bystanders within 5 m (15 ft) while lifting the machine.

The loader can be lifted with the Single Point Lift which is available as a kit from your Bobcat loader dealer.

The Single Point Lift, supplied by Bobcat, is designed to lift and support the Bobcat loader without affecting rollover and falling object protection features of the operator cab.

*Figure 145*

Attach lift to lift eye [Figure 145].

**NOTE:** Be sure the lifting equipment is of adequate size and capacity for the weight of the loader. (See Performance on Page 170.)

Four Point Lift

**WARNING**

- AVOID INJURY OR DEATH
- Before lifting, check fasteners on four point lift.
- Never allow riders in the cab or bystanders within 5 m (15 ft) while lifting the machine.

The loader can be lifted with the Four Point Lift which is available as a kit from your Bobcat loader dealer.

*Figure 146*

Attach cables or chains to lift eyes [Figure 146].

**NOTE:** Be sure the lifting equipment is of adequate size and capacity for the weight of the loader. (See Performance on Page 170.)
TRANSPORTING THE LOADER ON A TRAILER
Loading And Unloading

**WARNING**

**AVOID SERIOUS INJURY OR DEATH**
Adequately designed ramps of sufficient strength are needed to support the weight of the machine when loading onto a transport vehicle. Wood ramps can break and cause personal injury.

W-2058-0807

Be sure the transport and towing vehicles are of adequate size and capacity for weight of loader. (See Performance on Page 170.)

**Figure 147**

A loader with an empty bucket or no attachment must be loaded backward onto the transport vehicle **[Figure 147]**.

The rear of the trailer must be blocked or supported (Item 1) **[Figure 147]** when loading or unloading the loader to prevent the front end of the trailer from raising up.

**Fastening**

**Figure 148**

Use the following procedure to fasten the Bobcat loader to the transport vehicle to prevent the loader from moving during sudden stops or when going up or down slopes **[Figure 148]**.

- Lower the bucket or attachment to the floor.
- Stop the engine.
- Engage the parking brake.
- Install chains at the front and rear loader tie down positions **[Figure 148]**.
- Fasten each end of the chain to the transport vehicle.

MAINTENANCE SAFETY

**WARNING**

Instructions are necessary before operating or servicing machine. Read and understand the Operation & Maintenance Manual, Operator’s Handbook and signs (decals) on machine. Follow warnings and instructions in the manuals when making repairs, adjustments or servicing. Check for correct function after adjustments, repairs or service. Untrained operators and failure to follow instructions can cause injury or death.

Safety Alert Symbol: This symbol with a warning statement, means: “Warning, be alert! Your safety is involved!” Carefully read the message that follows.

- **CORRECT**
  - Use the correct procedure to lift or lower operator cab.
  - Cleaning and maintenance are required daily.

- **WRONG**
  - Never work on loader with lift arms up unless lift arms are held by an approved lift arm support device. Replace if damaged.
  - Never modify equipment or add attachments not approved by Bobcat Company.

- **CORRECT**
  - Disconnecting or loosening any hydraulic tubeline, hose, fitting, component or a part failure can cause lift arms to drop. Do not go under lift arms when raised unless supported by an approved lift arm support device. Replace it if damaged.

- **CORRECT**
  - Have good ventilation when welding or grinding painted parts. Wear dust mask when grinding painted parts. Toxic dust and gas can be produced. Avoid exhaust fume leaks which can kill without warning. Exhaust system must be tightly sealed.

- **WRONG**
  - Stop, cool and clean engine of flammable materials before checking fluids.
  - Stop, cool and clean engine of flammable materials before checking fluids.

- **CORRECT**
  - Lead-acid batteries produce flammable and explosive gases. Keep arcs, sparks, flames and lighted tobacco away from batteries.
  - Wear protective clothing. If acid contacts body, flush well with water. For eye contact flush well and get immediate medical attention.

- **WRONG**
  - Never fill fuel tank with engine running, while smoking or when near open flame.

- **CORRECT**
  - Keep body, jewelry and clothing away from moving parts, electrical contact, hot parts and exhaust.
  - Wear eye protection to guard from battery acid, compressed springs, fluids under pressure and flying debris when engines are running or tools are used. Use eye protection approved for type of welding.
  - Keep rear door closed except for service. Close and latch door before operating the loader.

- **WRONG**
  - Never service the Bobcat Skid-Steer Loader without instructions.

- **WRONG**
  - Avoid contact with leaking hydraulic fluid or diesel fuel under pressure. It can penetrate the skin or eyes.

- **CORRECT**
  - Keep arc, sparks, flames and lighted tobacco away from batteries.

- **WRONG**
  - Wear protective clothing. If acid contacts body, flush well with water. For eye contact flush well and get immediate medical attention.

Maintenance procedures which are given in the Operation & Maintenance Manual can be performed by the owner/operator without any specific technical training. Maintenance procedures which are not in the Operation & Maintenance Manual must be performed ONLY BY QUALIFIED BOBCAT SERVICE PERSONNEL. Always use genuine Bobcat replacement parts. The Service Safety Training Course is available from your Bobcat dealer.
## SERVICE SCHEDULE

### Chart

Maintenance work must be done at regular intervals. Failure to do so will result in excessive wear and early failures. The service schedule is a guide for correct maintenance of the Bobcat loader.

---

**WARNING**

Instructions are necessary before operating or servicing machine. Read and understand the Operation & Maintenance Manual, Operator’s Handbook and signs (decals) on machine. Follow warnings and instructions in the manuals when making repairs, adjustments or service. Checking correct function after adjustments, repairs or service. Untrained operators and failure to follow instructions can cause injury or death.

[1] Or every 12 months.

[2] Perform at first 50 hours, then as scheduled.

[3] Check every 8 - 10 hours for the first 24 hours, then at 50 hour intervals.

[4] Replace the hydraulic / hydrostatic filter element after the first 50 hours, then when service code [M0217] is displayed or as scheduled.

[5] Change oil and filter every 100 hours when operating under severe conditions.

[6] Perform at first 500 hours, then as scheduled.

The Inspection Checkbook (logbook) can be ordered for you by your local dealer. Part number: 4420300.
SERVICE SCHEDULE (CONT'D)

Contents Of The Inspection Checkbook (logbook)

Maintenance work must be done at regular intervals. Failure to do so will result in excessive wear and early failures. The service schedule is a guide for correct maintenance of the Bobcat loader.

The Inspection Checkbook contains the following information:

- Doosan Trading Limited Warranty Conditions
- Protection Plus Extended Warranty Conditions
- General Parts Policy
- General Information
- First Inspection
- Scheduled Services
- Authorised Identification
- Lubricants and Fluids Table
- Service Parts Charts

Your local dealer can order the Inspection Checkbook. Part number: 4420300.
BOBCAT INTERLOCK CONTROL SYSTEM (BICS)

Inspecting The BICS (Engine STOPPED - Key ON)

Figure 149

1. Sit in operator’s seat. Turn key to RUN or press RUN button. Lower seat bar and disengage parking brake. Press the PRESS TO OPERATE LOADER button (Item 4). Two BICS™ lights (Items 1 and 2) [Figure 149] [SEAT BAR AND LIFT & TILT VALVE] on left instrument panel must be OFF. The PRESS TO OPERATE LOADER button will light.

2. Raise seat bar fully. All three BICS™ lights (Items 1, 2 and 3) [Figure 149] [SEAT BAR, LIFT & TILT VALVE and PARKING BRAKE] on left instrument panel must be ON. The PRESS TO OPERATE LOADER button light will turn OFF.

Inspecting Deactivation Of The Auxiliary Hydraulics System (Engine STOPPED - Key ON)

3. Sit in operator’s seat, lower seat bar and press the PRESS TO OPERATE LOADER button (Item 4). Press the auxiliary hydraulics button (Item 5). The auxiliary hydraulics light will be ON (Item 6) [Figure 149]. Raise the seat bar. The light must be OFF.

Inspecting The Seat Bar Sensor (Engine RUNNING)

4. Sit in operator’s seat, lower seat bar, engage parking brake and fasten seat belt.

5. Start engine and operate at low idle. Press the PRESS TO OPERATE LOADER button. While raising the lift arms, raise the seat bar fully. The lift arms must stop. Repeat using the tilt function.

Inspecting The Traction Lock (Engine RUNNING)

6. Fasten seat belt, disengage parking brake, press the PRESS TO OPERATE LOADER button and raise seat bar fully. Move steering levers or joystick(s) slowly forward and backward. The TRACTION lock must be engaged. Lower the seat bar. Press the PRESS TO OPERATE LOADER button.

7. Engage parking brake and move steering levers or joystick(s) slowly forward and backward. The TRACTION lock must be engaged.

NOTE: The PARKING BRAKE light on the left instrument panel will remain ON until the engine is started, the PRESS TO OPERATE LOADER button is pressed and the parking brake is disengaged.

Inspecting The Lift Arm Bypass Control

8. Raise the lift arms 2 m (6 ft) off the ground. Stop engine. Turn lift arm bypass control knob clockwise 1/4 turn. Pull up and hold lift arm bypass control knob until lift arms slowly lower.

Inspecting Deactivation Of Lift And Tilt Functions (ACS, AHC and SJC)

9. Sit in operator’s seat and fasten seat belt. Lower seat bar, start engine and press the PRESS TO OPERATE LOADER button.

10. Raise lift arms about 2 m (6 ft) off the ground.

11. Turn key OFF or press STOP button, and wait for the engine to come to a complete stop.

12. Turn key ON or press RUN button. Press the PRESS TO OPERATE LOADER button, move the control (foot pedal, hand control or joystick) to lower the lift arms. Lift arms must not lower.

13. Move the control (foot pedal, hand control or joystick) to tilt the bucket (or attachment) forward. The bucket (or attachment) must not tilt forward.

WARNING

AVOID INJURY OR DEATH

The Bobcat Interlock Control System (BICS) must deactivate the lift, tilt and traction drive functions. If it does not, contact your dealer for service. DO NOT modify the system.

W-2151-0394
SEAT BAR RESTRAINT SYSTEM

Description
The seat bar restraint system has a pivoting seat bar with armrests.

The operator controls the use of the seat bar. The seat bar in the down position helps to keep the operator in the seat.

Models with Standard Controls have hydraulic valve spool interlocks for the lift and tilt functions. The spool interlocks require the operator to lower the seat bar in order to operate the foot pedal controls.

When the seat bar is down, the PRESS TO OPERATE LOADER button is activated and the engine is running, the lift, tilt and traction drive functions can be operated.

When the seat bar is up, the lift and tilt control pedals are locked when returned to the NEUTRAL position.

Models with Advanced Control System (ACS) have mechanical interlocks for the handles and pedals. The interlocks for the handles and pedals require the operator to lower the seat bar in order to operate the selected controls.

When the seat bar is down, the PRESS TO OPERATE LOADER button is activated and the engine is running, the lift, tilt and traction drive functions can be operated using the selected controls (handles or foot pedals).

When the seat bar is up, the handles and pedals are locked when returned to the NEUTRAL position.

Models with Advanced Hand Controls (AHC) have mechanical interlocks for the handles. The interlocks for the handles require the operator to lower the seat bar in order to operate the selected controls.

When the seat bar is down, the PRESS TO OPERATE LOADER button is activated and the engine is running, the lift, tilt and traction drive functions can be operated using the handles.

When the seat bar is up, the handles are locked when returned to the NEUTRAL position.

Models with Selectable Joystick Controls (SJC) have electrical deactivation of joystick functions. Activation of functions require the operator to lower the seat bar.

When the seat bar is down, the PRESS TO OPERATE LOADER button is activated and the engine is running, the lift, tilt and traction drive functions can be operated.

When the seat bar is up, the joystick functions are deactivated even though the joystick does not mechanically lock.

Inspecting
Sit in the seat and fasten the seat belt. Engage the parking brake. Pull the seat bar all the way down. Start the engine. Press the PRESS TO OPERATE LOADER button.

Operate the hydraulic controls to check that both the lift and tilt functions operate correctly. Raise the lift arms until the attachment is about 0,6 m (2 ft) off the ground.

Raise the seat bar. Move the hydraulic controls. Pedals and handles (if equipped) must be firmly locked in the NEUTRAL position (except joysticks). There must be no motion of the lift arms or tilt (attachment) when the controls are moved.

Lower the seat bar, press the PRESS TO OPERATE LOADER button and lower the lift arms. Operate the lift control. While the lift arms are going up, raise the seat bar. The lift arms must stop.

Lower the seat bar, press the PRESS TO OPERATE LOADER button, lower the lift arms and put the attachment flat on the ground. Stop the engine. Raise the seat bar. Operate the foot pedals and handles (if equipped) to be sure they are firmly locked in the NEUTRAL position (except joysticks).
Maintaining

See the SERVICE SCHEDULE for correct service interval. (See SERVICE SCHEDULE on Page 111.)

Figure 150

Use compressed air to clean any debris or dirt from the pivot parts. Do not lubricate. Inspect all mounting hardware. The correct hinge bolt (Item 1) torque is 34 - 38 N•m (25 - 28 ft-lb). The seat bar sensor nut (left side only) (Item 2) [Figure 150] torque is 6 - 8 N•m (50 - 70 in-lb).

If the seat bar system does not function correctly, replace parts that are worn or damaged. Use only genuine Bobcat replacement parts.

WARNING

The seat bar system must deactivate the lift and tilt control functions when the seat bar is up. Service the system if hydraulic controls do not deactivate.

W-2465-0703
WARNING

Failure to properly inspect and maintain the seat belt can cause lack of operator restraint resulting in serious injury or death.

Check the seat belt daily for correct function.

Inspect the seat belt system thoroughly at least once each year or more often if the machine is exposed to severe environmental conditions or applications.

Any seat belt system that shows cuts, fraying, extreme or unusual wear, significant discolorations due to ultraviolet UV exposure, dusty / dirty conditions, abrasion to the seat belt webbing, or damage to the buckle, latch plate, retractor (if equipped), hardware or any other obvious problem should be replaced immediately.

The items below are referenced in [Figure 151].

1. Check the webbing. If the system is equipped with a retractor, pull the webbing completely out and inspect the full length of the webbing. Look for cuts, wear, fraying, dirt and stiffness.

2. Check the buckle and latch for correct operation. Make sure latch plate is not excessively worn, deformed or buckle is not damaged or casing broken.

3. Check the retractor web storage device (if equipped) by extending webbing to determine if it looks correct and that it spools out and retracts webbing correctly.

4. Check webbing in areas exposed to ultraviolet (UV) rays from the sun or extreme dust or dirt. If the original colour of the webbing in these areas is extremely faded and / or the webbing is packed with dirt, the webbing strength can have deteriorated.

See your Bobcat dealer for seat belt system replacement parts for your machine.
LIFT ARM SUPPORT DEVICE

Installing

**WARNING**

Never work on a machine with the lift arms up unless the lift arms are secured by an approved lift arm support device. Failure to use an approved lift arm support device can allow the lift arms or attachment to fall and cause injury or death.

Service lift arm support device if damaged or if parts are missing. Using a damaged lift arm support or with missing parts can cause lift arms to drop causing injury or death.

**DANGER**

Avoid death

- Disconnecting or loosening any hydraulic tubing, hose, fitting, component or a part failure can cause lift arms to drop.
- Keep out of this area when lift arms are raised unless supported by an approved lift arm support. Replace if damaged.

Remove attachment from the loader. (See Installing And Removing The Attachment (Hand Lever Bob-Tach) on Page 87.) OR (See Installing And Removing The Attachment (Power Bob-Tach) on Page 89.)

**WARNING**

Before the cab or the lift arms are raised for service, jackstands must be put under the rear corners of the frame. Failure to use jackstands can allow the machine to tip backward causing injury or death.

Figure 152

Put jackstands under the rear corners of the loader frame (Inset) [Figure 152].

Disconnect the spring (Item 1) from the lift arm support device retaining pin. Support the lift arm support device (Item 2) with your hand and remove the retaining pin (Item 3) [Figure 152].

Figure 153

Lower the lift arm support device to the top of the lift cylinder. Hook the free end of the spring (Item 1) [Figure 153] to the lift arm support device so there will be no interference with the support device engagement.

Sit in the operator's seat, fasten the seat belt and lower the seat bar. Start the engine.
LIFT ARM SUPPORT DEVICE (CONT'D)

Installing (Cont'd)

Figure 154

Raise the lift arms until the lift arm support device drops onto the lift cylinder rod (Item 1) [Figure 154]

Lower the lift arms slowly until the support device is held between the lift arm and the lift cylinder. Stop the engine.

Raise the seat bar, disconnect the seat belt and make sure the lift and tilt functions are deactivated.

Install pin (Item 2) [Figure 154] into the rear of the lift arm support device below the cylinder rod.

Removing

Remove the pin from the lift arm support device.

Figure 155

Connect the spring (Item 1) [Figure 155] from the lift arm support device to the bracket below the lift arms.

Sit in the operator’s seat fasten the seat belt and lower the seat bar.

Start the engine.

Figure 156

Raise the lift arms a small amount. The spring will lift the support device off the lift cylinder rod. Stop the engine.

Raise the seat bar, disconnect the seat belt and make sure the lift and tilt functions are deactivated.

Disconnect the spring from the bracket.

Raise the support device into storage position and insert pin (Item 1) [Figure 156] through lift arm support device and bracket. Connect the spring to the pin.

Remove the jackstands.
BACK-UP ALARM SYSTEM

This machine can be equipped with a back-up alarm.

Description

The back-up alarm will sound when the operator moves both steering levers or joystick(s) into the reverse position. Slight movement of the steering levers into the reverse position is required with hydrostatic transmissions, before the back-up alarm will sound.

Inspecting

**Figure 157**

Inspect for damaged or missing back-up alarm decal (Item 1) [Figure 157]. Replace if required.

Sit in the seat and fasten the seat belt. Engage the parking brake. Pull the seat bar all the way down. Start the engine. Press the PRESS TO OPERATE LOADER button. Disengage the parking brake.

Move both steering levers or joystick(s) into the reverse position. The back-up alarm must sound when all wheels or both tracks are moving in reverse.

The back-up alarm is located on the inside of the rear door.

**Figure 158**

Inspect the back-up alarm electrical connections (Item 1), wire harness (Item 2) [Figure 158] and back-up alarm switches (if equipped) (Item 2) [Figure 159] for tightness and damage. Repair or replace any damaged components.

If the back-up alarm switches require adjustment, (See Adjusting Switch Position on Page 119.)

Adjusting Switch Position

**NOTE:** Joystick equipped machines do not have back-up alarm switches and cannot be adjusted. See your Bobcat dealer for service if your back-up alarm does not sound.

Standard Controls, ACS and AHC (If Equipped)

Stop the engine and raise the operator cab. (See Raising on Page 120.)

**Figure 159**

Place the steering levers in the neutral position.

Loosen the screws (Item 1) [Figure 159] securing the back-up alarm switches.

Position the back-up alarm switch rollers so that they just make contact with bellcranks without compressing the switch springs [Figure 159]. Torque the screws (Item 1) [Figure 159] securing the switches to the bracket to 1.6 - 2.1 N•m (14 - 19 in-lb).

Lower the operator cab. (See Lowering on Page 121.)

Inspect back-up alarm system for proper function. (See Inspecting on Page 119.)
OPERATOR CAB

Description

The Bobcat loader has an operator cab (ROPS and FOPS) as standard equipment to protect the operator from rollover and falling objects. The seat belt must be worn for rollover protection.

Check the ROPS, mounting and hardware for damage. Never modify the ROPS structure. Replace ROPS and hardware if damaged. See your Bobcat dealer for parts.

ROPS / FOPS - Roll Over protective Structure per ISO 3471, and Falling Object Protective Structure per SAE J1043 and ISO 3449, Level I. Level II is available.

Level I

Protection from falling bricks, small concrete blocks, and hand tools encountered in operations such as motorway maintenance, landscaping, and other construction sites.

Level II

Protection from falling trees, rocks: for machines involved in site clearing, overhead demolition or forestry.

WARNING

Never modify operator cab by welding, grinding, drilling holes or adding attachments unless instructed to do so by Bobcat Company. Changes to the cab can cause loss of operator protection from rollover and falling objects, and result in injury or death.

W-2069-0200

Raising

Always stop the engine before raising or lowering the cab.

Stop the loader on a level surface. Lower the lift arms. If the lift arms must be up while raising the operator cab, install the lift arm support device. (See LIFT ARM SUPPORT DEVICE on Page 117.)

W-2069-0200

WARNING

Before the cab or the lift arms are raised for service, jackstands must be put under the rear corners of the frame. Failure to use jackstands can allow the machine to tip backward causing injury or death.

W-2014-0895

Figure 160

Install jackstands under the rear of the loader frame [Figure 160].

Figure 161

Remove the nuts and plates [Figure 161] (both sides) at the front corners of the cab.
OPERATOR CAB (CONT'D)

Raising (Cont’d)

WARNING

UNEXPECTED LOADER, LIFT ARM OR ATTACHMENT MOVEMENT CAUSED BY CAB CONTACT WITH CONTROLS CAN CAUSE SERIOUS INJURY OR DEATH

- STOP ENGINE before raising or lowering cab.

NOTE: On some machines, the operator cab frame could contact the steering levers while raising or lowering the operator cab. The engine MUST be stopped before raising or lowering the operator cab.

Figure 162

Lift on the grab handles and bottom of the operator cab [Figure 162] slowly until the cab is all the way up and the latching mechanism engages.

Lowering

Always stop the engine before raising or lowering the cab.

NOTE: Always use the grab handles to lower the cab.

Figure 163

Pull down on the bottom of the operator cab until it stops at the latching mechanism [Figure 163].

NOTE: The weight of the cab increases when equipped with options and accessories such as cab door, heater, air conditioning, etc. In these cases, the cab can need to be raised slightly from the latch to be able to release the latch.

WARNING

UNEXPECTED LOADER, LIFT ARM OR ATTACHMENT MOVEMENT CAUSED BY CAB CONTACT WITH CONTROLS CAN CAUSE SERIOUS INJURY OR DEATH

- STOP ENGINE before raising or lowering cab.

NOTE: On some machines, the operator cab frame could contact the steering levers while raising or lowering the operator cab. The engine MUST be stopped before raising or lowering the operator cab.

Support the cab and release the latching mechanism (Inset) [Figure 163]. Remove your hand from the latch mechanism when the cab is past the latch stop. Use both hands to lower the cab all the way down.
OPERATOR CAB (CONT’D)

Lowering (Cont’d)

**WARNING**

PINCH POINT CAN CAUSE INJURY
Remove your hand from the latching mechanism when the cab is past the latch stop.

W-2469-0803

Install the plates and nuts (both sides) [Figure 164].

Tighten the nuts to 54 - 61 N•m (40 - 45 ft-lb) torque.

**Cab Door Sensor**

Figure 165

The cab door has a sensor (Item 1) [Figure 165] installed which deactivates the lift and tilt valves when the door is open.

A decal is located on the latch mechanism (Item 2) [Figure 165].

The LIFT & TILT VALVE light (Item 3) [Figure 166] will be OFF when the door is closed, the key switch is turned to RUN or the RUN / ENTER button is pressed, the seat bar is lowered and the PRESS TO OPERATE LOADER button is pressed.

Figure 166

The LIFT & TILT VALVE light (Item 3) [Figure 165] will be ON when the door is open, the key switch is turned to RUN or the RUN / ENTER button is pressed, the seat bar is lowered and the PRESS TO OPERATE LOADER button is pressed.

[DOOR] will appear in the data display [Figure 166].
REAR DOOR (TAILGATE)
Opening And Closing

Figure 167
Reach into the slot in the rear door and pull the latch handle [Figure 167].
Pull the rear door open.

Figure 168
Move the door stop into the engaged position (Item 1) [Figure 168] to hold the door open.
Move the door stop up (Item 2) [Figure 168] to disengage the door stop and allow the door to close.
Close the rear door.

Adjusting

Figure 169
The door latch (Item 1) [Figure 169] can be adjusted up or down for alignment with the door latch mechanism.
Close the rear door before operating the loader.

REAR GRILL

Removing
Open the rear door.

Figure 170
Lift and pull the rear grill to remove it from the loader [Figure 170].

Installing
Align the tabs of the rear grill into the slots in the loader frame (Inset) [Figure 170].
Lower the rear grill and close the rear door.

WARNING
Keep the rear door closed when operating the machine. Failure to do so could seriously injure a bystander.

W-2020-1285
**HEATING SYSTEM**

This machine can be equipped with a Heating System.

**Cleaning And Maintenance**

The heating system requires regular inspection and maintenance. (See SERVICE SCHEDULE on Page 111.)

**Filters**

**Figure 171**

The *Fresh Air Filter* (Item 1) [*Figure 171*] is located below the rear window outside the cab. Remove the clamping knobs, filter cover and filter.

Shake the filter or use low pressure air to remove dirt. This can be done several times before replacement is required. Install the filter, filter cover and clamping knobs.

**Figure 172**

The *Recirculation Filter* (Item 1) [*Figure 172*] is located in front of the rear window inside the cab. Remove the clamping knobs, filter cover, and filter.

Shake the filter or use a vacuum to clean. This can be done several times before replacement is required. Install the filter with the arrows pointing forward (inset) [*Figure 172*], install the filter cover and clamping knobs.

**Heater Coil**

Raise the operator cab. (See Raising on Page 120.)

**Figure 173**

Remove the cover screws (Item 1) [*Figure 173*] and remove the cover.

**Figure 174**

Use low pressure air or water to remove debris from the heater coil (Item 1) [*Figure 174*].

Install the cover and lower the operator cab. (See Lowering on Page 121.)

**Troubleshooting**

If the fan does not run, check the fuse. (See ELECTRICAL SYSTEM on Page 133.)
AIR CLEANER SERVICE
Replacing Filter Elements

Figure 175

It is important to change the air filter element only when necessary. The Service indicator (Item 1) will FLASH and service code [M0117] (Air Filter Plugged) will show in the Data Display (Item 2) when the Information button (Item 3) [Figure 175] is held for two seconds.

The Air Cleaner icon on the Deluxe Instrumentation Panel, if equipped, will be ON (Item 1) [Figure 176].

Replace the inner filter every third time the outer filter is replaced or as indicated.

Figure 176

Outer Filter

Figure 177

Remove the wing nut and remove the dust cover (Item 1) [Figure 177].

Figure 178

Remove the wing nut and pull the outer filter element (Item 1) [Figure 178] out and discard.

NOTE: Make sure all sealing surfaces are free of dirt and debris.

Install new filter. Push all the way in until it contacts the base of the housing. Install wing nut.

Install the dust cover and the wing nut [Figure 177].
AIR CLEANER SERVICE (CONT’D)

Replacing Filter Elements (Cont’d)

Inner Filter

Only replace the inner filter element under the following conditions:

- Replace the inner filter element every third time the outer filter is replaced.
- After the outer element has been replaced, start the engine and run at full rpm. If the HOURMETER / CODE DISPLAY shows [M0117] (Air Filter Plugged), replace the inner filter element.

Figure 179

Remove the inner filter element (Item 1) [Figure 179].

NOTE: Make sure all sealing surfaces are free of dirt and debris.

Install the new inner element [Figure 179].

Install the outer element and wing nut.

Figure 180

Install the dust cover and the wing nut (Item 1) [Figure 179].
**FUEL SYSTEM**

**Fuel Specifications**

Use only clean, high quality diesel fuel, Grade No. 2 or Grade No. 1.

The following is one suggested blending guideline which should prevent fuel gelling during cold temperatures:

<table>
<thead>
<tr>
<th>TEMPERATURE °C (°F)</th>
<th>NO. 2</th>
<th>NO. 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>-9° (+15°)</td>
<td>100%</td>
<td>0%</td>
</tr>
<tr>
<td>Down to -29° (-20°)</td>
<td>50%</td>
<td>50%</td>
</tr>
<tr>
<td>Below -29° (-20°)</td>
<td>0%</td>
<td>100%</td>
</tr>
</tbody>
</table>

At a minimum, Low Sulfur (500 ppm sulfur) Diesel Fuel must be used in this machine:

The following fuels can also be used in this machine:

- Low Sulfur (500 ppm sulfur) Diesel Fuel.
- Ultra Low Sulfur (15 ppm sulfur) Diesel Fuel.
- Biodiesel Blend Fuel - Must contain no more than five percent biodiesel mixed with low sulfur or ultra low sulfur petroleum based diesel. This is commonly marketed as B5 blended diesel fuel. B5 blended diesel fuel must meet ASTM D975 (US Standard) or EN590 (EU Standard) specifications.

**Biodiesel Blend Fuel**

Biodiesel blend fuel has unique qualities that should be considered before using in this machine:

- Cold weather conditions can lead to plugged fuel system components and hard starting.
- Biodiesel blend fuel is an excellent medium for microbial growth and contamination which can cause corrosion and plugging of fuel system components.
- Use of biodiesel blend fuel can result in premature failure of fuel system components, such as plugged fuel filters and deteriorated fuel lines.
- Shorter maintenance intervals can be required, such as cleaning the fuel system and replacing fuel filters and fuel lines.
- Using biodiesel blended fuels containing more than five percent biodiesel can affect engine life and cause deterioration of hoses, tubelines, injectors, injector pump and seals.

Apply the following guidelines if biodiesel blend fuel is used:

- Ensure the fuel tank is as full as possible at all times to prevent moisture from collecting in the fuel tank.
- Ensure that the fuel tank cap is securely tightened.
- Biodiesel blend fuel can damage painted surfaces, remove all spilled fuel from painted surfaces immediately.
- Drain all water from the fuel filter daily before operating the machine.
- Avoid exceeding engine oil change interval. Extended oil change intervals can cause engine damage.
- Before vehicle storage; drain the fuel tank, refill with 100% petroleum diesel fuel, add fuel stabilizer and run the engine for at least 30 minutes.

**NOTE:** Biodiesel blend fuel does not have long term stability and should not be stored for more than three months.
FUEL SYSTEM (CONT’D)
Filling The Fuel Tank

WARNING

AVOID INJURY OR DEATH
Stop and cool the engine before adding fuel. NO SMOKING! Failure to obey warnings can cause an explosion or fire.

Figure 181

Remove the fill cap (Item 1) [Figure 181].

Figure 182

Use a clean, approved safety container to add fuel of the correct specification. Add fuel only in an area that has free movement of air and no open flames or sparks NO SMOKING [Figure 182].

Install and tighten the fuel cap (Item 1) [Figure 181].
FUEL SYSTEM (CONT’D)

Fuel Filter

For the service interval for removing water from, or replacing the fuel filter (See SERVICE SCHEDULE on Page 111.)

Removing Water

Figure 183

Loosen the drain (Item 1) [Figure 183] at the bottom of the filter element to remove water from the filter.

Replacing Element

Remove the filter element (Item 2) [Figure 183].

Clean the area around the filter housing. Put clean oil on the seal of the new filter element. Install the fuel filter, and hand tighten.

Remove air from the fuel system. (See Removing Air From The Fuel System on Page 129.)

WARNING

AVOID INJURY OR DEATH

Always clean up spilled fuel or oil. Keep heat, flames, sparks or lighted tobacco away from fuel and oil. Failure to use care around combustibles can cause explosion or fire.

Removing Air From The Fuel System

After replacing the filter element or when the fuel tank has run out of fuel, the air must be removed from the fuel system before starting the engine.

WARNING

AVOID INJURY OR DEATH

Diesel fuel or hydraulic fluid under pressure can penetrate skin or eyes, causing serious injury or death. Fluid leaks under pressure may not be visible. Use a piece of cardboard or wood to find leaks. Do not use your bare hand. Wear safety goggles. If fluid enters skin or eyes, get immediate medical attention from a doctor familiar with this injury.

Figure 184

Open the vent (Item 3) [Figure 184] on the fuel filter housing.

Squeeze the hand pump (priming bulb) (Item 2) [Figure 184] until fuel flows from the vent with no air bubbles.

Close the vent (Item 3) [Figure 184].

It can be necessary to open the vent (Item 1) [Figure 184] briefly while engine is running. Close the vent when the engine runs smoothly.
ENGINE LUBRICATION SYSTEM

Checking And Adding Engine Oil

Check the engine oil level every day before starting the engine for the work shift.

Figure 185

Park the machine on level ground. Open the rear door and remove the dipstick (Item 1) [Figure 185]. Keep the oil level between the marks on the dipstick. Do not overfill.

Engine Oil Chart

Figure 186

Removing And Replacing Oil And Filter

For the service interval for replacing the engine oil and filter (See SERVICE SCHEDULE on Page 111.)

Run the engine until it is at operating temperature. Stop the engine.

Figure 187

Open the rear door and remove the drain hose from its storage position (Item 1) [Figure 187].

Remove the oil drain cap (Item 2) [Figure 187] and drain the oil into a container. Recycle or dispose of used oil in an environmentally safe manner.

Install the oil drain cap.

Remove the oil filter (Item 3) [Figure 187] and clean the filter housing surface.

Use genuine Bobcat filter only.

Put oil on the new filter gasket, install the filter and hand tighten.

Remove the fill cap (Item 2) [Figure 185].

Put oil in the engine. For the correct quantity (See Capacities on Page 172.) Do not overfill.

Start the engine and let it run for several minutes. Stop the engine and check for leaks at the filter.

Remove the dipstick (Item 1) [Figure 185] and check the oil level. Add oil as needed if it is not at the top mark on the dipstick. Install the dipstick and close the rear door.

WARNING

AVOID INJURY OR DEATH

Always clean up spilled fuel or oil. Keep heat, flames, sparks or lighted tobacco away from fuel and oil. Failure to use care around combustibles can cause explosion or fire.

W-2103-0508
ENGINE COOLING SYSTEM

Check the cooling system every day to prevent overheating, loss of performance or engine damage.

WARNING

AVOID INJURY OR DEATH
Wear safety glasses to prevent eye injury when any of the following conditions exist:
- When fluids are under pressure.
- Flying debris or loose material is present.
- Engine is running.
- Tools are being used.

Cleaning

Open the rear door. (See REAR DOOR (TAILGATE) on Page 123.)

Remove the rear grill. (See REAR GRILL on Page 123.)

Figure 188

Use low air pressure or water pressure to clean the top of the oil cooler (Item 1) [Figure 188].

Figure 189

NOTE: Be careful when raising and lowering the oil cooler so that the oil cooler does not fall on the radiator and damage the fins.

Raise the oil cooler (Item 1) and use low air pressure or water pressure to clean the top of the radiator (Item 2) [Figure 189].

Lower the oil cooler.

Install the rear grill and close the rear door.
ENGINE COOLING SYSTEM (CONT’D)

Removing And Replacing Coolant

Open the rear door and remove the rear grill.

**Figure 190**

Remove the coolant fill cap (Item 1) **[Figure 190]**.

Connect a hose to the engine block drain valve (Item 3) **[Figure 190]**. Open the drain valve and drain the coolant into a container.

After all the coolant is removed, close the drain valve and remove the hose. Recycle or dispose of coolant in an environmentally safe manner.

Mix new coolant in a separate container. (See Capacities on Page 172.)

**NOTE:** The loader is factory filled with propylene glycol coolant (purple colour). DO NOT mix propylene glycol with ethylene glycol.

Add premixed coolant, 47% water and 53% propylene glycol to the recovery tank. (See Checking Level on Page 132.)

The correct mixture of coolant to provide a -37°C (-34°F) freeze protection is 5 L propylene glycol mixed with 4.4 L of water OR 1 U.S. gal propylene glycol mixed with 3.5 qt of water.

Fill the tank until it is at the lower marker on the tank.

Use a refractometer to check the condition of propylene glycol in your cooling system and replace the coolant fill cap.

**NOTE:** When installing the coolant fill cap, the cap must be tightened until it clicks.

Run the engine until it is at operating temperature. Stop the engine. Check the coolant level when cool. Add coolant as needed.

Install the rear grill and close the rear door.

**Checking Level**

Open the rear door and raise the rear grill.

Check coolant level using the level markers (Item 2) **[Figure 190]** on the tank. Coolant must be at the bottom marker when the engine is cold; top marker when hot.

Close the rear door before operating the loader.

**IMPORTANT**

**AVOID ENGINE DAMAGE**

Always use the correct ratio of water to antifreeze.

Too much antifreeze reduces cooling system efficiency and may cause serious premature engine damage.

Too little antifreeze reduces the additives which protect the internal engine components; reduces the boiling point and freeze protection of the system.

Always add a premixed solution. Adding full strength concentrated coolant can cause serious premature engine damage.

**NOTE:** All access covers (Item 1) **[Figure 191]** (both sides) must be in place to ensure correct air flow through the oil cooler which will ensure cooling for engine and hydraulic system.
**ELECTRICAL SYSTEM**

Description

**Figure 192**

The loader has a 12 volt, negative ground alternator charging system. The electrical system is protected by fuses located in the cab on the steering control panel, and a 100 amp master fuse [Figure 192] in the engine compartment on the left side of the engine, under the air cleaner. The fuses will protect the electrical system when there is an electrical overload. The reason for the overload must be found before starting the engine again.

**Fuse And Relay Location / Identification**

**Figure 193**

The electrical system is protected from overload by fuses and relays under the fuse panel cover (Item 1) [Figure 193]. A decal is inside the cover to show location and amp ratings.

Remove the cover to check or replace the fuses.

R - Relay
ELECTRICAL SYSTEM (CONT’D)

Battery Maintenance

Figure 195

The battery cables must be clean and tight [Figure 195]. Check electrolyte level in the battery. Add distilled water as needed. Remove acid or corrosion from battery and cables with sodium bicarbonate (baking soda) and water solution.

Put Battery Saver (6988074) or grease on the battery terminals and cable ends to prevent corrosion.

WARNING

AVOID INJURY OR DEATH

Batteries contain acid which burns eyes and skin on contact. Wear goggles, protective clothing and rubber gloves to keep acid off body.

In case of acid contact, wash immediately with water. In case of eye contact get prompt medical attention and wash eye with clean, cool water for at least 15 minutes.

If electrolyte is taken internally drink large quantities of water or milk! DO NOT induce vomiting. Get prompt medical attention.

W-2065-0807
ELECTRICAL SYSTEM (CONT’D)

Using A Booster Battery (Jump Starting)

If it is necessary to use a booster battery to start the engine, BE CAREFUL! There must be one person in the operator’s seat and one person to connect and disconnect the battery cables.

The key switch must be OFF or the STOP button must be pressed. The booster battery must be 12 volt.

WARNING

BATTERY GAS CAN EXPLODE AND CAUSE SERIOUS INJURY OR DEATH

Keep arcs, sparks, flames and lighted tobacco away from batteries. When jumping from booster battery, make final connection (negative) at machine frame.

Do not jump start or charge a frozen or damaged battery. Warm battery to 16°C (60°F) before connecting to a charger. Unplug charger before connecting or disconnecting cables to battery. Never lean over battery while boosting, testing or charging.

Connect the end of the first cable (Item 1) to the positive (+) terminal of the booster battery. Connect the other end of the same cable (Item 2) [Figure 196] to the positive terminal on the loader starter.

Connect the end of the second cable (Item 3) to the negative terminal of the booster battery. Connect the other end of the same cable (Item 4) [Figure 196] to the engine.

Keep cables away from moving parts. Start the engine. (See STARTING THE ENGINE on Page 76.)

After the engine has started, remove the ground (-) cable (Item 4) first. Remove the cable from the positive terminal (Item 2) [Figure 196].

IMPORTANT

Damage to the alternator can occur if:

- Engine is operated with battery cables disconnected.
- Battery cables are connected when using a fast charger or when welding on the loader. (Remove both cables from the battery.)
- Extra battery cables (booster cables) are connected wrong.

Figure 196

![Figure 196](P-31860)
ELECTRICAL SYSTEM (CONT’D)

Removing And Installing Battery

**WARNING**

AVOID INJURY OR DEATH

Batteries contain acid which burns eyes and skin on contact. Wear goggles, protective clothing and rubber gloves to keep acid off body.

In case of acid contact, wash immediately with water. In case of eye contact get prompt medical attention and wash eye with clean, cool water for at least 15 minutes.

If electrolyte is taken internally drink large quantities of water or milk! DO NOT induce vomiting. Get prompt medical attention.

Open the rear door.

*Figure 197*

Disconnect the negative (-) cable (Item 1) [*Figure 197*].

Remove the battery hold down clamp (Item 2) [*Figure 197*].

Disconnect the positive (+) cable (Item 3) [*Figure 197*] from the battery.

Remove the battery from the loader.

Always clean the battery terminals and cable ends when installing a new or used battery [*Figure 198*].

When installing the battery in the loader, do not touch any metal parts with the battery terminals.

Connect the negative (-) cable last to prevent sparks.

Connect and tighten the battery cables.

Install and tighten the battery hold down.

Close the rear door before operating the loader.

**WARNING**

BATTERY GAS CAN EXPLODE AND CAUSE SERIOUS INJURY OR DEATH

Keep arcs, sparks, flames and lighted tobacco away from batteries. When jumping from booster battery make final connection (negative) at machine frame.

Do not jump start or charge a frozen or damaged battery. Warm battery to 16°C (60°F) before connecting to a charger. Unplug charger before connecting or disconnecting cables to battery. Never lean over battery while boosting, testing or charging.
HYDRAULIC / HYDROSTATIC SYSTEM

Checking And Adding Fluid

Check the hydraulic / hydrostatic fluid level every day before starting the work shift.

Put the loader on a level surface, lower the lift arms and tilt the Bob-Tach fully back.

Stop the engine.

Figure 199

Remove the dipstick (Item 1) [Figure 199].

Remove the fill cap (Item 2) [Figure 199].

Add fluid [Figure 199] as needed to bring the level to the top mark on the dipstick. Do not overfill.

Remove the screen (Item 3) [Figure 199] and clean with solvent as needed.

Install the fill cap.

Hydraulic / Hydrostatic Fluid Chart

Figure 200

HYDRAULIC / HYDROSTATIC FLUID
RECOMMENDED ISO VISCOSITY GRADE (VG) AND VISCOSITY INDEX (VI)

TEMPERATURE RANGE ANTICIPATED DURING MACHINE USE

[1] VG 100; Minimum VI 130
[2] VG 46; Minimum VI 150
[3] BOBCAT All-Season Fluid
[4] BOBCAT Synthetic Fluid
[5] BOBCAT Biodegradable Hydraulic / Hydrostatic Fluid (Unlike biodegradable fluids that are vegetable based, Bobcat biodegradable fluid is formulated to prevent oxidation and thermal breakdown at operating temperatures).

Use only recommended fluid in the hydraulic system [Figure 200].
HYDRAULIC / HYDROSTATIC SYSTEM (CONT’D)

Removing And Replacing Hydraulic Fluid

For the correct service interval (See SERVICE SCHEDULE on Page 111.)

Replace the fluid if it becomes contaminated or after major repair.

Always replace the hydraulic / hydrostatic filter, the case drain filters and the hydraulic charge filter whenever the hydraulic fluid is replaced. (See Removing And Replacing Hydraulic / Hydrostatic Filter on Page 139.)

Figure 201

Remove the fill cap (Item 1) [Figure 201].

Raise the operator cab. (See Raising on Page 120.)

Figure 202

Disconnect the hose (Item 1) [Figure 202] from the hydraulic reservoir and drain the fluid into a container.

Reconnect the hose when reservoir is empty.

WARNING

AVOID INJURY OR DEATH

Always clean up spilled fuel or oil. Keep heat, flames, sparks or lighted tobacco away from fuel and oil. Failure to use care around combustibles can cause explosion or fire.

Recycle or dispose of used fluid in an environmentally safe manner.

Add the correct fluid to the reservoir until the fluid level is at the top mark on the dipstick. (See Checking And Adding Fluid on Page 137.)

Install the fill cap.
HYDRAULIC / HYDROSTATIC SYSTEM (CONT’D)

Removing And Replacing Hydraulic / Hydrostatic Filter

For the correct service interval (See SERVICE SCHEDULE on Page 111.)

Raise the operator cab. (See Raising on Page 120.)

Earlier Models

Figure 203

Remove the filter (Item 1) [Figure 203].

Clean the surface of the filter housing where the filter seal contacts the housing.

Put clean oil on the seal of the new filter. Install and hand tighten the new filter.

Later Models

Figure 204

Remove and discard the filter element (Item 1) [Figure 205].

Clean the surface of the filter housing and the filter base where they contact the filter element seal.

Put clean oil on the seal of the new filter element. Install the element on the filter base. Install and hand tighten the filter housing to 47 - 54 N•m (35 - 40 ft-lb) torque.

All Models

WARNING

AVOID INJURY OR DEATH

Always clean up spilled fuel or oil. Keep heat, flames, sparks or lighted tobacco away from fuel and oil. Failure to use care around combustibles can cause explosion or fire.

W-2103-0508

Lower the operator cab. (See Lowering on Page 121.)

Start the engine and operate the loader hydraulic controls.

WARNING

AVOID INJURY OR DEATH

Diesel fuel or hydraulic fluid under pressure can penetrate skin or eyes, causing serious injury or death. Fluid leaks under pressure may not be visible. Use a piece of cardboard or wood to find leaks. Do not use your bare hand. Wear safety goggles. If fluid enters skin or eyes, get immediate medical attention from a doctor familiar with this injury.

W-2072-EN-0909

Stop the engine and check for leaks at the filter.

Check the fluid level in the reservoir and add as needed. (See Checking And Adding Fluid on Page 137.)
HYDRAULIC / HYDROSTATIC SYSTEM (CONT'D)

Removing And Replacing Case Drain Filters

For the correct service interval (See SERVICE SCHEDULE on Page 111.)

Raise the operator cab. (See Raising on Page 120.)

Figure 206

Disconnect the hoses from the case drain filter (Item 1) [Figure 206].

Remove the case drain filter (Item 2) [Figure 206].

Install new case drain filter.

WARNING

AVOID INJURY OR DEATH
Always clean up spilled fuel or oil. Keep heat, flames, sparks or lighted tobacco away from fuel and oil. Failure to use care around combustibles can cause explosion or fire.

W-2103-0508

Install right side access cover and lower the cab. (See Lowering on Page 121.)

Start the engine and operate the loader hydraulic controls. Stop the engine and check for leaks.

WARNING

Hydraulic fluid escaping under pressure can have sufficient force to enter a person's body by penetrating the skin. This can cause serious injury and possible death if proper medical treatment by a physician familiar with this injury is not received immediately.

W-2145-0290

Check the fluid level in the reservoir and add as needed. (See Checking And Adding Fluid on Page 137.)

Figure 207

Remove the right side access cover.

Disconnect the hoses from the case drain filter (Item 1) [Figure 207].

Remove the filter (Item 2) [Figure 207].
HYDRAULIC / HYDROSTATIC SYSTEM (CONT’D)

Removing And Replacing Hydraulic Charge Filter

The hydraulic charge filter is located under the cab. For the correct service interval (See SERVICE SCHEDULE on Page 111.)

Raise the operator cab. (See Raising on Page 120.)

Figure 208

Remove the filter (Item 1) [Figure 208].

Clean the surface of the filter housing where the filter seal contacts the housing.

Put clean oil on the seal of the new filter.

Install and hand tighten the new filter.

WARNING
AVOID INJURY OR DEATH
Always clean up spilled fuel or oil. Keep heat, flames, sparks or lighted tobacco away from fuel and oil. Failure to use care around combustibles can cause explosion or fire.

Stop the engine and check for leaks at the filter.

Check the fluid level in the reservoir and add as needed. (See Checking And Adding Fluid on Page 137.)

Breather Cap

For the correct service interval (See SERVICE SCHEDULE on Page 111.)

Raise the operator cab. (See Raising on Page 120.)

Figure 209

Remove the breather cap (Item 1) [Figure 209] and discard.

Install new breather cap.

Lower the operator cab. (See Lowering on Page 121.)

Start the engine and operate the loader hydraulic controls.
SPARK ARRESTER MUFFLER

Cleaning Procedure

See the SERVICE SCHEDULE for service interval for cleaning the spark arrester muffler. (See SERVICE SCHEDULE on Page 111.)

Do not operate the loader with a defective exhaust system.

**IMPORTANT**

This machine is factory equipped with a spark arrester exhaust system.

The spark arrester muffler, if equipped, must be cleaned to keep it in working condition. The spark arrester muffler must be serviced by dumping the spark chamber every 100 hours of operation.

On some models, the turbocharger functions as the spark arrester and must operate correctly for proper spark arrester function.

If this machine is operated on flammable forest, brush, or grass covered land, a spark arrester attached to the exhaust system may be required and must be maintained in working order. Refer to local laws and regulations for spark arrester requirements.

Stop the engine. Open the rear door. 

![Figure 210](image)

Remove the plug (Item 1) [Figure 210] from the bottom of the muffler.

**WARNING**

When the engine is running during service, the driving and steering controls must be in neutral and the parking brake engaged. Failure to do so can cause injury or death.

Start the engine and run for about 10 seconds while a second person, wearing safety glasses, holds a piece of wood over the outlet of the muffler.

This will force contaminants out through the cleanout hole.

Stop the engine.

Install and tighten the plug.

Close the rear door.

**WARNING**

Stop engine and allow the muffler to cool before cleaning the spark chamber. Wear safety goggles. Failure to obey can cause serious injury.

**WARNING**

Never use machine in atmosphere with explosive dust or gases or where exhaust can contact flammable material. Failure to obey warnings can cause injury or death.
TYRE MAINTENANCE

Wheel Nuts

Figure 211

See your SERVICE SCHEDULE for the service interval to check the wheel nuts [Figure 211]. (See SERVICE SCHEDULE on Page 111.)

When installing wheel nuts, tighten to 217 N•m (160 ft-lb) torque.

When checking wheel nut torque, set the torque wrench to 190 N•m (140 ft-lb) to prevent over-tightening.

Rotating

Check the tyres regularly for wear, damage and pressure.

Figure 212

Rear tyres usually wear faster than front tyres. To keep tyre wear even, move the front tyres to the rear and rear tyres to the front [Figure 212].

It is important to keep the same size tyres on each side of the loader. If different sizes are used, each tyre will be turning at a different rate and cause excessive wear. The tread bars of all the tyres must face the same direction.

Recommended tyre pressure must be maintained to avoid excessive tyre wear and loss of stability and handling capability. Check for correct pressure before operating the loader.

Mounting

Tyres are to be repaired only by an authorised person using the proper procedures and safe equipment.

Tyres and rims must always be checked for correct size before mounting. Check rim and tyre bead for damage.

The rim flange must be cleaned and free of rust.

The tyre bead and rim flange must be lubricated with a rubber lubricant before mounting the tyre.

Avoid excessive pressure which can rupture the tyre and cause serious injury or death.

During inflation of the tyre, check the tyre pressure frequently to avoid over inflation.

WARNING

AVOID INJURY OR DEATH

Do not inflate tyres above specified pressure. Failure to use correct tyre mounting procedure can cause an explosion which can result in injury or death.

W-2078-EN-0909

IMPORTANT

Inflate tyres to the MAXIMUM pressure shown on the sidewall of the tyre. DO NOT mix brands of tyres used on the same loader.

I-2057-EN-0909
**FINAL DRIVE TRANSMISSION (CHAINCASE)**

**Checking And Adding Oil**

The chaincase contains the final drive sprockets and chains and uses the same type of oil as the hydraulic/hydrostatic system. (See Hydraulic System on Page 171.)

Stop the loader on a level surface and stop the engine.

**Figure 213**

Remove the drain plug (Item 1) from the front of the chaincase housing.

If oil can be reached with the tip of your finger through the hole, the oil level is correct.

If the level is low, add oil through the check plug hole until the oil flows from the hole.

Install and tighten the plug.

**Removing And Replacing Oil**

**Figure 214**

Remove the check plug (Item 1) from the front of the chaincase housing.

**Figure 215**

Remove the oil from the chaincase. Recycle or dispose of the used oil in an environmentally safe manner.

Add oil through the check plug hole until the oil flows from the hole.

---

**WARNING**

**AVOID INJURY OR DEATH**

Always clean up spilled fuel or oil. Keep heat, flames, sparks or lighted tobacco away from fuel and oil. Failure to use care around combustibles can cause explosion or fire.

W-2103-0508
**ALTERNATOR BELT**

**Belt Adjustment**

Stop the engine.

Raise the operator cab. (See Raising on Page 120.)

**Figure 216**

Loosen the alternator mounting bolt (Item 1) [Figure 216].

Loosen the adjustment bolt (Item 2) [Figure 216].

Move the alternator until the belt has 8 mm (5/16 in) movement at the middle of the belt span with 66 N (15 lb) of force.

Tighten the adjustment bolt and mounting bolt.

Lower the operator cab. (See Lowering on Page 121.)

**Belt Replacement**

Loosen the alternator mounting and adjustment bolts (Item 1 and 2) [Figure 216] and loosen the belt all the way.

Remove the belt and install new belt.

Adjust the belt. (See Belt Adjustment on Page 145.)
DRIVE BELT

Belt Adjustment

Stop the engine.

Open the rear door and disconnect the negative (-) cable from the battery.

Remove three belt shield fasteners and remove the belt shield.

Figure 217

Loosen the bolt (Item 1) on the spring loaded drive idler.

NOTE: The pointer will be at the 1 o'clock position (Item 2) when the belt tensioner is not under spring tension.

Figure 218

Push the idler pulley against the belt, using a pry bar. The pointer will be at the 3 o'clock position (Item 1) when the idler pulley is against the stop (maximum movement).

Raise the idler assembly slightly so that the pulley is operating on spring tension and not against the stop.

NOTE: Do not set the idler against the travel stop in the 3 o'clock position.

Tighten the mounting bolt (Item 1) to 34 - 38 N•m (25 - 28 ft-lb) torque.

Run the engine for a few minutes. Stop the engine and recheck the pointer position.

Readjust if necessary.

After the idler has been in service, readjust when the pointer reaches the 1 o'clock position.

Install the belt shield and fasteners.

Connect the negative (-) battery cable.

Close the rear door.

Belt Replacement

Follow the steps above to loosen the drive belt tensioner.

Remove the bolt (Item 1) from the tensioner and remove the tensioner assembly.

Remove the drive belt from the pump pulley and flywheel and remove the belt from the loader.

Install the new drive belt. Install the belt tensioner assembly. Apply Loctite® 242 to the mounting bolt (Item 1) and tighten to 34 - 38 N•m (25 - 28 ft-lb) torque.

Adjust the drive belt, reinstall previously removed components and continue procedure from Belt Adjustment above.
LUBRICATING THE LOADER

Lubrication Locations

Lubricate the loader as specified for the best performance of the loader. (See SERVICE SCHEDULE on Page 111.)

Record the operating hours each time you lubricate the Bobcat loader.

Always use a good quality lithium based multipurpose grease when you lubricate the loader. Apply lubricant until extra grease shows.

Lubricate the following locations on the loader:

1. Rod End Lift Cylinder (Both Sides) (2) [Figure 219].
2. Base End Lift Cylinder (Both Sides) (2) [Figure 220].
3. Lift Arm Pivot Pin (Both Sides) (2) [Figure 221].
4. Base End Tilt Cylinder (1) [Figure 222].
LUBRICATING THE LOADER (CONT’D)

Lubrication Locations (Cont’d)

Figure 223

5. Rod End Tilt Cylinder (1) [Figure 223].

6. Bob-Tach Pivot Pin (Both Sides) (2) [Figure 223].

Figure 224

7. Bob-Tach Wedge (Both Sides) (2) [Figure 224].

Figure 225

8. 250 Hours: Steering Lever Shaft (If Equipped) [Figure 225].

Figure 226

Figure 227

9. Power Bob-Tach Pivot Pins (If Equipped) [Figure 226] and [Figure 227].
PIVOT PINS

Inspection And Maintenance

Figure 228

All lift arm and cylinder pivots have a large pin held in position with a retainer bolt and lock nut (Item 1) [Figure 228].

Check that the lock nuts are tightened to 48 - 54 N•m (35 - 40 ft-lb) torque.
BOB-TACH (HAND LEVER)

Inspection And Maintenance

Figure 229

Move the Bob-Tach levers down to engage the wedges [Figure 229].

The levers and wedges must move freely.

WARNING

AVOID INJURY OR DEATH

The Bob-Tach wedges must extend through the holes in the attachment mounting frame. Levers must be fully down and locked. Failure to secure wedges can allow attachment to come off.

Figure 230

The spring loaded wedge (item 1) must contact the lower edge of the hole in the attachment (item 2) [Figure 230].

If the wedge does not contact the lower edge of the hole [Figure 230], the attachment will be loose and can come off the Bob-Tach.

Figure 231

Inspect the mounting frame on the attachment and Bob-Tach, linkages and wedges for excessive wear or damage [Figure 231]. Replace any parts that are damaged, bent or missing. Keep all fasteners tight.

Look for cracked welds. Contact your Bobcat dealer for repair or replacement parts.

Lubricate the wedges. (See SERVICE SCHEDULE on Page 111.) (See LUBRICATING THE LOADER on Page 147.)
**BOB-TACH (POWER)**

This machine can be equipped with a Power Bob-Tach.

**Inspection And Maintenance**

**Figure 232**

Push and hold the BOB-TACH “WEDGES UP” switch (Item 1) until wedges are fully raised. Push and hold the BOB-TACH “WEDGES DOWN” switch (Item 2) [Figure 232] until the wedges are fully down.

The levers and wedges must move freely.

---

**WARNING**

**AVOID INJURY OR DEATH**

The Bob-Tach wedges must extend through the holes in the attachment mounting frame. Levers must be fully down and locked. Failure to secure wedges can allow attachment to come off.

---

**Figure 233**

The wedges (Item 1) [Figure 233] must extend through the holes in the attachment mounting frame.

The spring loaded wedge (Item 1) must contact the lower edge of the hole in the attachment (Item 2) [Figure 233].

If the wedge does not contact the lower edge of the hole [Figure 233], the attachment will be loose and can come off the Bob-Tach.

---

**Figure 234**

Inspect the mounting frame on the attachment and Bob-Tach, linkages and wedges for excessive wear or damage [Figure 234]. Replace any parts that are damaged, bent or missing. Keep all fasteners tight.

Look for cracked welds. Contact your Bobcat dealer for repair or replacement parts.

Lubricate the wedges. (See SERVICE SCHEDULE on Page 111.) (See LUBRICATING THE LOADER on Page 147.)
LOADER STORAGE AND RETURN TO SERVICE

Storage

Sometimes it can be necessary to store your Bobcat loader for an extend period of time. Below is a list of items to perform before storage.

• Thoroughly clean the loader including the engine compartment.
• Lubricate the loader.
• Replace worn or damaged parts.
• Park the loader in a dry protected shelter.
• Lower the lift arms all the way and put the bucket flat on the ground.
• Put blocks under the frame to remove weight from the tyres.
• Put grease on any exposed cylinder rods.
• Put fuel stabilizer in the fuel tank and run the engine a few minutes to circulate the stabilizer to the pump and fuel injectors.

If biodiesel blend fuel has been used, perform the following:

Drain the fuel tank, refill with 100% petroleum diesel fuel, add fuel stabilizer and run the engine for at least 30 minutes.

• Drain and flush the cooling system. Refill with premixed coolant.
• Replace all fluids and filters (engine, hydraulic / hydrostatic).
• Replace air cleaner, heater and air conditioning filters.
• Put all controls in neutral position.
• Remove the battery. Be sure the electrolyte level is correct then charge the battery. Store it in a cool dry place above freezing temperatures and charge it periodically during storage.
• Cover the exhaust pipe opening.
• Tag the machine to indicate that it is in storage condition.

Return To Service

After the Bobcat loader has been in storage, it is necessary to follow a list of items to return the loader to service.

• Check the engine and hydraulic oil levels; check coolant level.
• Install a fully charged battery.
• Remove grease from exposed cylinder rods.
• Check all belt tensions.
• Be sure all shields and guards are in place.
• Lubricate the loader.
• Check tyre inflation and remove blocks from under frame.
• Remove cover from exhaust pipe opening.
• Start the engine and let run for a few minutes while observing the instrument panels and systems for correct operation.
• Operate machine, check for correct function.
• Stop the engine and check for leaks. Repair as needed.

DIAGNOSTIC SERVICE CODES

Viewing Service Codes

Figure 235

Press the INFORMATION button (Item 1) to cycle the DATA DISPLAY (Item 2) [Figure 235] until the service code screen is displayed. If more than one SERVICE CODE is present, the codes will scroll on the DATA DISPLAY.

NOTE: Corroded or loose grounds can cause multiple service codes and/or abnormal symptoms. All instrument panel lights flashing, alarm sounding, headlights and taillights flashing, could indicate a bad ground. The same symptoms could apply if the voltage is low, such as loose or corroded battery cables. If you observe these symptoms, check grounds and positive leads first.

Deluxe Instrumentation Panel

The optional Deluxe Instrumentation Panel offers an additional view of service codes.

Figure 236

The Display Panel will list the Code Number, (CODE), hourmeter reading when the error occurred (HOUR), and the User (USER) who was logged in to operate the machine when the error occurred [Figure 236].

A total of 40 Codes can be stored. When more than 40 codes occur, the oldest code will disappear and the newest code will be in the number 1 position.
DIAGNOSTIC SERVICE CODES (CONT’D)

Service Codes List

Figure 237

The following word errors may be displayed:

[REPLY] One or both instrument panel(s) not communicating with the controller.

[CODE] The controller is asking for a password. (Keyless Start and Deluxe Instrumentation Panels only.)

[ERROR] The wrong password was entered. (Keyless Start and Deluxe Instrumentation Panels only.)

[SHTDN] A shutdown condition exists.

[DOOR] Operator cab door is open. (Lift and Tilt functions will not operate.)

More Examples

Clocks

Press . . .

TOOL / SETUP

DISPLAY OPTIONS

CLOCKS

SET CLOCK
Use the keypad to set time.
Press RUN / ENTER to set clock.
Press EXIT to return to previous level menu.

RESET JOB CLOCK (Password required)
(Job Clock keeps a running total for job hours)
Press CLEAR to reset Job Clock to zero.
Press LOCK / UNLOCK to unlock.
Enter Password and press RUN / ENTER.

Languages

Press . . .

TOOL / SETUP

DISPLAY OPTIONS

LANGUAGES
Select the language, press RUN / ENTER.
Press EXIT to return to previous level menu.

Vitals (Monitor the engine, hydraulic / hydrostatic, electrical functions when engine is running.)

Press . . .

TOOL / SETUP

LOADER FEATURES

VITALS
Press SELECTION ARROW to select METRIC or ENGLISH (M / E) readouts

You can monitor real-time readouts of:
- Engine Oil Pressure
- Engine Coolant Temperature
- Hydraulic Charge Pressure
- Hydraulic Oil Temperature
- System Voltage
- Engine Speed

The Deluxe Instrumentation Panel is easy to use. Continue to set your own preferences for running / monitoring your Bobcat loader.

Attachment Control Information (Deluxe Instrumentation Panel)
The Deluxe Instrumentation Panel allows the user to view information concerning the operation of Bobcat attachments.

Figure 240

Attachments are listed alphabetically [Figure 240]. Press the exit button to return one screen or press the “0” (zero) key to return to the home screen immediately.
PASSWORD SETUP (KEYLESS START PANEL)

Password Description

Master Password:
A permanent, randomly selected password set at the factory which cannot be changed. This password is used for service by the Bobcat dealer if the owner password is not known; or to change the owner password.

Owner Password:
Allows for full use of the loader. It must be used to change the owner password.

Changing The Owner Password

Press the RUN button to turn on the loader electrical system.

Enter the five digit owner password using the number keys (1 through 0) if locked.

Press and hold the lock (Item 1) and unlock (Item 2) keys for two seconds.

The lock key red light will flash and the left panel display screen will show [ENTER].

Enter a new five digit password using the number keys (1 through 0). An asterisk will show in the left panel display screen for each key press.

The left panel display screen will show [AGAIN].

Enter the new five digit password again.

The lock key red light will become solid.

Password Lockout Feature

This feature allows the owner to unlock the password feature so that a password does not need to be used every time the engine is started.

Press the RUN button to turn on the loader electrical system.

Enter the five digit owner password using the number keys (1 through 0).

Press the unlock key (Item 2) [Figure 242].

The left panel display screen will show [CODE].

Enter the five digit owner password using the number keys (1 through 0). The unlock key green light will flash, then become solid.

The loader can now be started without using a password.

NOTE: Use the following procedure to reset the machine lock so that the loader requires a password to start the engine.

Press the RUN button to turn on the loader electrical system.

Press the lock key (Item 1) [Figure 242].

The lock key red light will flash and the left panel display screen will show [CODE].

Enter the five digit owner password using the number keys (1 through 0). The unlock key green light will flash, then the lock key red light will become solid.

You must now enter the password every time to start the loader.
PASSWORD SETUP (DELUXE INSTRUMENTATION PANEL)

Password Setup is available on machines with a Deluxe Instrumentation Panel.

Password Description

All new machines with a Deluxe Instrumentation Panel arrive at Bobcat dealerships with the keypad in locked mode. This means that a password must be used to start the engine.

For security purposes, your dealer can change the password and also set it in the locked mode. Your dealer will provide you with the password.

Master Password:

A permanent, randomly selected password set at the factory which cannot be changed. This password is used for service by the Bobcat dealer if the owner password is not known; or to change the owner password.

Owner Password:

Allows for full use of the loader and to setup the Deluxe Instrumentation Panel. There is only one owner password. It must be used to change the owner or user passwords. Owner should change the password as soon as possible for security of the loader.

User Password:

Allows starting and operating the loader; cannot change password or any of the other setup features.

For the procedures to change passwords (See Changing The Owner Password on Page 164.) (See Changing The User Passwords on Page 165.)
PASSWORD SETUP (DELUXE INSTRUMENTATION PANEL) (CONT'D)

Changing The User Passwords

Figure 244

Password Lockout Feature

This feature allows the owner to unlock the password feature so that a password does not need to be used every time the engine is started.

Figure 245

Press TOOL / SETUP

Press OWNER UTILITIES

Enter PASSWORD (owner or master) on Keypad then press ENTER to Continue

Press PASSWORD UTILITIES

Enter USER number on Keypad (There can be up to 8 different Users, each with their own password) then press ENTER to Continue

Enter USER PASSWORD on Keypad then press ENTER to Continue

USER PASSWORD procedure is now complete. Enter another USER number

OR

Press EXIT

Press LOCK / UNLOCK

Enter OWNER PASSWORD on Keypad then press ENTER to Continue

Press UNLOCK MACHINE

Machine is now UNLOCKED and can be started without using a password
**MAINTENANCE CLOCK**

**Description**

The Maintenance Clock alerts the operator when the next service interval is due. **EXAMPLE:** The Maintenance Clock can be set to a 250 hour interval as a reminder for the next 250 hour planned maintenance.

**Figure 246**

During machine operation, a two beep alarm will sound when there are less than 10 hours until the next planned maintenance.

The remaining hours before maintenance is required will appear in the data display (Item 1) for five seconds while the service icon (Item 3) and hourmeter icon (Item 2) [Figure 246] flash.

**NOTE:** The display will show negative numbers after counting down to zero.

The display will then revert back to the previous display and will appear for five seconds every time the machine is started until the maintenance clock is reset.

**Figure 247**

The Deluxe Instrumentation Panel, if equipped, will display a message (Item 1) [Figure 247] alerting the operator to service the machine. This message will remain for 10 seconds before reverting back to the previous screen and will appear for 10 seconds every time the machine is started until the maintenance clock is reset.

**Setup**

See your Bobcat dealer about installation of this feature.

**Reset**

See your Bobcat dealer to reset the maintenance clock.

**Figure 248**

The Deluxe Instrumentation Panel, if equipped, will display a wrench icon (Item 1) [Figure 248] alerting the operator to service the machine. This icon will remain on the display until the maintenance clock is reset.

**NOTE:** Loaders equipped with a Standard Key Panel or Keyless Start Panel will not display the BobCARESM PM message or wrench icon on the right panel.

The Deluxe Instrumentation Panel, if equipped, will display a message (Item 1) [Figure 247] alerting the operator to service the machine.

(S130) LOADER SPECIFICATIONS

Machine Dimensions

• Dimensions are given for loader equipped with standard tyres and 54 inch Dirt bucket and can vary with other bucket types. All dimensions are shown in millimeters. Respective imperial dimensions are given in inches enclosed by parentheses.
• Where applicable, specifications conform to SAE or ISO standards and are subject to change without notice.

Changes of structure or weight distribution of the loader can cause changes in control and steering response and can cause failure of the loader parts.

WARRANTY

BOBCAT LOADERS

DOOSAN BENELUX S.A. warrants to its authorised dealers who in turn warrant to the end-user / owner that each new Bobcat loader will be free from proven defects in material and workmanship for twelve months from the date of delivery to the end-user / owner or 2000 hours of machine usage, whichever occurs first.

During the warranty period, the authorised selling Bobcat dealer shall repair or replace, at DOOSAN BENELUX S.A.’s option, without charge for parts, labour and travel time of mechanics, any part of the Bobcat product which fails because of defects in material and workmanship. The end-user / owner shall provide the authorised Bobcat dealer with prompt written notice of the defect and allow reasonable time for replacement or repair. DOOSAN BENELUX S.A. may, at its option, request failed parts to be returned to the factory. Transportation of the Bobcat product to the authorised Bobcat dealer for warranty work is the responsibility of the end-user / owner.

Service schedules must be adhered to, documented and genuine parts / lubricants must be used. The warranty does not cover parts and lubricants, coolant fluids, filter elements, tune-up parts, bulbs, fuses, ignition system parts (glow plugs, fuel injection pumps, injectors), alternator fan belts, drive belts and other high-wear items. Pins and bushings are considered to be normal consumable items and are not warranted.

The warranty does not apply to tyres or other trade accessories not manufactured by Bobcat. The owner shall rely solely on the warranty, if any, of the respective manufacturers thereof. The warranty does not cover damages resulting from abuse, accidents, alterations, use of the Bobcat product with any bucket or attachment not approved by Bobcat, air flow obstructions, or failure to maintain or use the Bobcat product according to the instructions applicable to it.

DOOSAN BENELUX S.A. EXCLUDES OTHER CONDITIONS, WARRANTIES OR REPRESENTATIONS OF ALL KINDS, EXPRESSED OR IMPLIED, STATUTORY OR OTHERWISE (EXCEPT THAT OF TITLE) INCLUDING ALL IMPLIED WARRANTIES AND CONDITIONS RELATING TO MERCHANTABILITY, SATISFACTORY QUALITY AND FITNESS FOR A PARTICULAR PURPOSE.

CORRECTIONS BY DOOSAN BENELUX S.A. OF NONCONFORMITIES WHETHER PATENT OR LATENT, IN THE MANNER AND FOR THE TIME PERIOD PROVIDED ABOVE, SHALL CONSTITUTE FULfilMENT OF ALL LIABILITIES OF DOOSAN BENELUX S.A. FOR SUCH NONCONFORMITIES, WHETHER BASED ON CONTRACT, WARRANTY, TORT, NEGLIGENCE, INDEMNITY, STRICT LIABILITY OR OTHERWISE WITH RESPECT TO OR ARISING OUT OF SUCH PRODUCT.

THE REMEDIES OF THE END-USER / OWNER SET FORTH UNDER THE PROVISIONS OF THE WARRANTY OUTLINED ABOVE ARE EXCLUSIVE AND THE TOTAL LIABILITY OF DOOSAN BENELUX S.A.
